Specification, Algebra, and Software Shusaku Iida, José Meseguer, Kazuhiro Ogata, 2014-03-01 This Festschrift volume published in honor of Kokichi Futatsugi contains 31 invited contributions from internationally leading researchers in formal methods and software engineering Prof Futatsugi is one of the founding fathers of the field of algebraic specification and verification and is a leading researcher in formal methods and software engineering He has pioneered and advanced novel algebraic methods and languages supporting them such as OBJ and CafeOBJ and has worked tirelessly over the years to bring such methods and tools in contact with software engineering practice This volume contains contributions from internationally leading researchers in formal methods and software engineering Optimization in Planning and Operation of Electric Power Systems Karl Frauendorfer, Hans Glavitsch, Rainer Bacher, 2013-10-14 Permanently increasing requirements in power supply necessitate efficient control of electric power systems An emerging subject of importance is optimization Papers on modelling aspects of unit commitment and optimal power flow provide the introduction to power systems control and to its associated problem statement Due to the nature of the underlying optimization problems recent developments in advanced and well established mathematical programming methodologies are presented illustrating in which way dynamic separable continuous and stochastic features might be exploited In completing the various methodologies a number of presentations have stated experiences with optimization packages currently used for unit commitment and optimal power flow calculations This work represents a state of the art of mathematical programming methodologies unit commitment optimal power flow and their applications in power system control Intelligent Systems and Applications Kohei Arai, 2025-09-02 The 11th Intelligent Systems Conference IntelliSys 2025 held in Amsterdam The Netherlands from 28 29 August 2025 brought together researchers practitioners and experts from around the world to share advancements in intelligent technologies Conducted in a hybrid format the conference facilitated global collaboration and participation This volume presents a curated selection of 169 peer reviewed papers from a total of 470 submissions covering key areas such as Artificial Intelligence Computer Vision Robotics and Intelligent Systems The contributions reflect the latest research trends practical applications and emerging challenges in these domains We hope that these proceedings serve as a valuable resource for researchers practitioners and students and that they inspire future work and collaborations in the field of intelligent systems Compute, 1991 *Catalog* Sears, Roebuck and Company, 1928 **Improving automobile fuel economy : new standards, new approaches.**, 1991 *Naval Anti-Aircraft Guns and Gunnery* Norman Friedman, 2014-01-21 This book does for naval anti aircraft defence what the author's Naval Firepower did for surface gunnery it makes a highly complex but historically crucial subject accessible to the layman It chronicles the growing aerial threat from its inception in the First World War and the response of each of the major navies down to the end of the Second highlighting in particular the widely underestimated danger from dive bombing Central to this discussion is an analysis of

what effective AA fire control required and how well each navy's systems actually worked. It also takes in the weapons themselves how they were placed on ships and how this reflected the tactical concepts of naval AA defence. As would be expected from any Friedman book it offers striking insights; he argues for example that the Royal Navy so often criticised for lack of air-mindedness was actually the most alert to the threat but that its systems were inadequate not because they were too primitive but because they tried to achieve too much. The book summarises the experience of WW2 particularly in theatres where the aerial danger was greatest and a concluding chapter looks at post 1945 developments that drew on wartime lessons. All important guns, directors and electronics are represented in close-up photos and drawings and lengthy appendices detail their technical data. It is simply another superb contribution to naval technical history by its leading exponent.

Zappa Gear Mick Ekers, 2023-09-21 Frank Zappa was an unremitting musical innovator and experimenter always looking for ways to exploit the latest advances in technology. His working life coincided with the explosive development of music technology that ran from the 1960s through the following three decades. Without such inventions as the Marshall amplifier, the Gibson SG, the wah-wah pedal and the Synclavier much of it modified to his requirements and used in ways for which they had never been designed. Zappa's air sculptures as his music has been described would have had a significantly different shape and texture. Lavishly illustrated including over 180 unique photographs of Frank Zappa's guitars and equipment taken by the author at his UMRK studio in LA and featuring a foreword by Dweezil Zappa. Zappa Gear offers an unprecedented inside look at the machinery behind the legendary music. In addition to a detailed presentation of the equipment Zappa Gear also introduces some of the pioneering inventors, engineers and entrepreneurs without whom the instruments would not exist. Zappa Gear is an official Frank Zappa book produced and written with the full cooperation and endorsement of Gail Zappa and the Zappa Family Trust.

Simulation, Modeling, and Programming for Autonomous Robots Noriako Ando, Stephen Balakirsky, Thomas Hemker, Monica Reggiani, Oskar von Stryk, 2010-11-11 Why are the many highly capable autonomous robots that have been promised for novel applications driven by society industry and research not available day despite the tremendous progress in robotics science and systems achieved during the last decades Unfortunately steady improvements in specific robot abilities and robot hardware have not been matched by corresponding robot performance in real world environments This is mainly due to the lack of advancements in robot software that master the development of robotic systems of ever increasing complexity In addition fundamental open problems are still awaiting sound answers while the development of new robotics applications suffers from the lack of widely used tools libraries and algorithms that are redesigned in a modular and performant manner with standardized interfaces Simulation environments are playing a major role not only in reducing development time and cost e g by systematic software or hardware in the loop testing of robot performance but also in exploring new types of robots and applications However their use may still be regarded with skepticism Seamless migration of code using robot simulators to real world systems is still a rare circumstance due to the complexity of robot world sensor and actuator modeling These challenges drive the quest for the next generation of methodologies and tools for robot development The objective of the International Conference on Simulation Modeling and Programming for Autonomous Robots SIMPAR is to offer a unique forum for these topics and to bring together researchers from academia and industry to identify and solve the key issues necessary to ease the development of increasingly complex robot software
