Ochs, 2007-08-23 With the advent of high throughput technologies following completion of the human genome project and similar projects the number of genes of interest has expanded and the traditional methods for gene function analysis cannot achieve the throughput necessary for large scale exploration This book brings together a number of recently developed techniques for looking at gene function including computational biochemical and biological methods and protocols

High Content Screening D. Lansing Taylor, 2008-02-04 There has always been some

tension between proponents of hypothesis driven and discovery driven research in the broad field of life sciences Academic research has been primarily focused on hypothesis driven research However the success of the human genome project a discovery driven research approach has opened the door to adding other types of discovery driven research to a continuum of research approaches In contrast drug discovery research in the pharmaceutical industry has embraced discovery driven research for many years A good example has been the discovery of active compounds from large chemical libraries through screening campaigns The success of the human genome project has also demonstrated the need for both academic researchers and industrial researchers to now understand the functions of genes and gene products The cell is the basic unit of life and it has been at the cellular level where function can be demonstrated most cost effectively and rapidly High content screening HCS was developed by Cellomics Inc in the mid 1990s to address the need for a platform that could be used in the discovery driven research and development required to understand the functions of genes and gene products at the level of the cell
