To scroll automatically, hold + or -
4. When value is adjusted, press **SET** again
5. Repeat steps 2 to 4 as needed or hold **SET** for 2 seconds to exit the set mode

F. TAKING YOUR HEART RATE

The small digits at the right display the percentage of your current heart rate to your maximum heart rate (up to 90%). MIO calculates this percentage using your personal data. A maximum heart rate is an estimate with a variability of up to 15 BPM.

You return to the previous mode 5 seconds after removing your finger pads from the MIO sensors.

TROUBLESHOOTING POINTERS

1. If you don't get your heart rate within 30 seconds, motion finger pads and try again. It helps to wear your MIO for a little while to allow a layer of moisture to build up between the back of the watch and your arm. Do not press too hard on sensors.
2. If MIO's calculations start to vary significantly from what you have come to expect, if the digits freeze or if the face is blank, replace MIO's battery (see Section K).
3. To optimize readings, occasionally clean the back of your MIO case and the metal **UPPER** and **LOWER MIO** sensors with a clean soft cloth.

Manual of Neonatal Care John P. Cloherty, Ann R. Stark, Eric C. Eichenwald, 2004 This manual provides a practical approach to the diagnosis and management of problems of neonates The book is divided into four sections Maternal and Fetal Problems Neonatal Problems Procedures and Appendices An outline format provides quick access to a large amount of information The Fifth Edition has been fully updated to reflect advances in caring for ever smaller neonates Two popular appendices from the third edition Effects of Maternal Drugs on the Fetus and Drug Use by Nursing Mothers are reincorporated into the new edition

Advances in Artificial Pancreas Systems Ali Cinar, Kamuran Turksoy, 2018-03-01 This brief introduces recursive modeling techniques that take account of variations in blood glucose concentration within and between individuals It describes their use in developing multivariable models in early warning systems for hypo and hyperglycemia these models are more accurate than those solely reliant on glucose and insulin concentrations because they can accommodate other relevant influences like physical activity stress and sleep Such factors also contribute to the accuracy of the adaptive control systems present in the artificial pancreas which is the focus of the brief as their presence is indicated before they have an apparent effect on the glucose concentration and so can be more easily compensated The adaptive controller is based on generalized predictive control techniques and also includes rules for changing controller parameters or structure based on the values of physiological variables Simulation studies and clinical studies are reported to illustrate the performance of the techniques presented
