*New Science - New Architecture?* Charles Jencks, 1998-05 This issue addresses how architectural thinking and practices change in light of emergent technologies and the belief that architecture changes only when society experiences fundamental shifts in the basic framework of thought The author asks if the new science of nonlinear dynamics has supplanted the old one if architecture is more attuned to nature than linear mechanics and how far chaos and complexity theories have been accepted as primary explanations

**Complexity** Andrea Gleiniger, Georg Vrachliotis, 2012-11-05 Digitalization has transformed the discourse of architecture that discourse is now defined by a wealth of new terms and concepts that previously either had no meaning or had different meanings in the context of architectural theory and design Its concepts and strategies are increasingly shaped by influences emerging at the intersection with scientific and cultural notions from modern information technology The series Context Architecture seeks to take a critical selection of concepts that play a vital role in the current discourse and put them up for discussion When Vitruvius described the architect as a uomo universale he gave rise to the architect s conception of him or herself as a generalist who shapes a complex reality The architectural concept of complexity however failed to keep pace with industrial and social reality becoming instead an increasingly formal and superficial notion that could ultimately be applied to almost anything Against it architectural modernism set the watchword of simplification less is more In this situation Robert Venturi reintroduced the notion of complexity into architectural discourse his goal was not just to restore the complexity of architectonic forms and their history but also to explore the concrete reality of the existing built environment Today it is complexity studies with their starting point in physics that define the current approach to the concept of complexity They have established a new connection between the natural sciences and information technology and have thus become a central premise of computer based approaches to design
