Part 2: The passage below contains 5 mistakes. Identify the mistakes and write the corrections in the corresponding numbered boxes. There is an example at the beginning.

Insects are by far the most successful organisms on the planet. Their remarkably survival rate is often due to cunning disguises which make them visible to predators. A famous example of this was the discovery of an unusual black moth in the industrial city of Manchester in 1848. It came from a species which had until then always been, without exception, grey in color. Careful researches revealed that the moth had undergone an incredible transformation in response to the blackening of its smoke-polluted environment.

Within 50 years, all such moths in Manchester were black. Although impressive, this process of a species adapting in response to an environmental change still took decades. In contrast, today's African savannah grasshopper manages to remain largely detected by its predators, by changing color at the spot.
