reflects recent research findings and acts as a useful guide to the new generation of control systems for a wide readership of advanced undergraduate and graduate students as well as practising engineers. The authors guide readers quickly and concisely through the complex topics of neural networks, fuzzy logic, mathematical modelling of electrical machines, power systems control and VHDL design. Unlike the academic monographs that have previously been published on each of these subjects, this book combines them and is based round case studies of systems analysis, control strategies, design, simulation and implementation. The result is a guide to applied control systems design that will appeal equally to students and professional design engineers. The book can also be used as a unique VHDL design aid based on real world power engineering applications.

*Microwave Engineering* M. L. Sisodia, 2005. This book has been written strictly according to the latest syllabus prescribed by U P Technical University Lucknow for undergraduate students of Electronics Communication Engineering. Its first chapter discusses the microwave propagation through waveguides. The second chapter describes microwave cavity resonators. The third chapter deals with microwave components. Chapter four explains various microwave measurements. The chapter five discusses limitations of conventional active devices at microwave frequencies and introduces various microwave tubes and their classification. Chapter six is divided into three parts: 6A, 6B, 6C and discusses O type, 6A, 6B and M type, 6C tubes. Microwave semiconductor devices have been discussed in chapters seven to nine. Microwaves and their applications are described in an introduction. Authors have taken special care in keeping a balance between mathematical and physical approach. Large number of illustrative diagrams have been incorporated. A good number of solved problems. Picture from university examination papers have been included for reinforcing the key concepts.
