Ulanowicz, 2012-12-06 What in the ever loving blue eyed world do these Ulanowicz's innocuous comments on thermodynamics have to do with ecology Anonymous manuscript reviewer The American Naturalist 1979 The germ of the idea grows very slowly into something recognizable It may all start with the mere desire to have an idea in the first place Walt Kelly Ten Ever Lovin Blue Eyed Years with Pogo 1959 It all seems extremely interesting but for the life of me it sounds as if you pulled it out of the air my good friend Ray Lassiter exclaimed to me after enduring about 20 minutes of my enthusiasm for the newly formulated concept of ascendancy in ecosystems It wasn't I replied but it would take a book to show you where it came from If such was the reaction of someone usually sympathetic to my manner of thinking what could I expect from those who viewed biological development in the traditional way After all I was suggesting that it is possible to quantify the growth and development of

an entire ecosystem. Furthermore, I was maintaining that this development was not entirely determined by events and entities at smaller scales and yet could influence these component processes and structures. To be sure, mine was only the latest of many challenges to straight reductionism but like everyone else with a new idea I thought mine was special.

Flows of Energy and Materials in Marine Ecosystems M. J. R. Fasham, 2013-03-09 The impetus for the conference held at Bombannes France in May 1982 arose out of a Scientific Committee on Oceanic Research SCOR Working Group on Mathematical Models in Biological Oceanography. This group was chaired by K. H. Mann and held two meetings in 1977 and 1979. At both meetings it was felt that although reductionist modelling of marine ecosystems had achieved some successes the future progress lay in the development of holistic ecosystem models. The members of the group K. H. Mann, T. Platt, J. M. Colebrook, D. F. Smith, M. J. R. Fasham, J. Field, G. Radach, R. E. Ulanowicz and F. Wulff produced a critical review of reductionist and holistic models which was published by the Unesco Press. Platt, Mann and Ulanowicz, 1981. One of the conclusions of this review was that whether holistic or reductionist models are preferred it is critically important to increase the scientific effort in the measurement of physiological rates for the computation of ecological fluxes. The Working Group therefore recommended that an international meeting should be organized which would attempt to bring together theoretical ecologists and biological oceanographers to assess the present and future capability for measuring ecological fluxes and incorporating these data into models. An approach was made to the Marine Sciences Panel of the NATO Science Committee who expressed an interest in funding such a meeting. They awarded a planning grant and a planning group was formed consisting of M. J. R. Fasham, M. V. Angel, T. Platt, R. E. *Mathematical Ecology* S. A. Levin, T. G. Hallam, 2013-03-13 **Android**

John McDowell is one of the English

speaking world's most influential living philosophers whose work has shaped debates in mind language metaphysics epistemology meta ethics and the history of philosophy A common thread running through McDowell's diverse contributions has been his critique of a form of reductive naturalism according to which human minds must be governed by laws essentially similar to those that govern the rest of nature Against this widely accepted view McDowell maintains that human minds should be seen as transformed by reason in such a way that the principles governing our minds while not supernatural are in an important sense sui generis Editors Matthew Boyle and Evgenia Mylonaki assemble a group of distinguished philosophers to clarify and criticize McDowell's core position and explore its repercussions for contemporary debates about metaphysics and epistemology perception language action and value The essays here scrutinize the core idea that human reason constitutes a second nature emerging from humanity's basic animal nature and reflect on the underpinnings of McDowell's claims in Aristotle Kant and Hegel Many of the contributors extend McDowell's views beyond his own articulations elaborating the transformative role that reason plays in human experience In clarifying and expanding McDowell's insights Reason in Nature challenges contemporary orthodoxy much as McDowell himself has And as this collection makes clear McDowell's unorthodox position is of enduring importance and has wide ranging implications still not fully appreciated for ongoing philosophical debates
