Nexus Mark Buchanan, 2002 Nexus is an exciting introduction to the hidden geometry that weaves our lives so inextricably together BOOK JACKET Nexus: Small Worlds and the Groundbreaking Theory of Networks Mark Buchanan, 2003-06-17 As Chaos explained the science of disorder Nexus reveals the new science of connection and the odd logic of six degrees of separation If you ever wanted to know how many links connect you and the Pope or why when the U S Federal Reserve Bank sneezes the global economy catches cold read this book writes John L Casti Santa Fe Institute This cogent and engaging Nature work presents the fundamental principles of the emerging field of small worlds theory the idea that a hidden pattern is the key to how networks interact and exchange information whether that network is the information highway or the firing of neurons in the brain Mathematicians physicists computer scientists and social scientists are working to decipher this complex organizational system for it may yield a blueprint of dynamic interactions within our physical as well as social worlds Highlighting groundbreaking research behind network theory Mark Buchanan's graceful lucid nontechnical and entertaining prose Mark Granovetter documents the mounting support among various disciplines for the small worlds idea and demonstrates its practical applications to diverse problems from the volatile global economy or the Human Genome Project to the spread of infectious disease or ecological damage Nexus is an exciting introduction to the hidden geometry that weaves our lives so inextricably together Nexus Mark Buchanan, 2003 **High Performance Computing and Communications** Ronald Perrott, Barbara Chapman, Jaspal Subhlok, Rodrigo Fernandes de Mello, Laurence T. Yang, 2007-09-08 This book constitutes the refereed proceedings of the Third International Conference on High Performance Computing and Communications HPCC 2007 The 75 revised full papers address all current issues of parallel and distributed systems and high performance computing and communication including networking protocols embedded systems wireless mobile and pervasive computing Web services and internet computing and programming interfaces for parallel systems

Power Laws, Scale-Free Networks and Genome Biology Eugene V. Koonin, Yuri Wolf, Georgy Karev, 2007-03-06 Power Laws Scale free Networks and Genome Biology deals with crucial aspects of the theoretical foundations of systems biology namely power law distributions and scale free networks which have emerged as the hallmarks of biological organization in the post genomic era The chapters in the book not only describe the interesting mathematical properties of biological networks but moves beyond phenomenology toward models of evolution capable of explaining the emergence of these features The collection of chapters contributed by both physicists and biologists strives to address the problems in this field in a rigorous but not excessively mathematical manner and to represent different viewpoints which is crucial in this emerging discipline Each chapter includes in addition to technical descriptions of properties of biological networks and evolutionary models a more general and accessible introduction to the respective problems Most chapters emphasize the potential of theoretical systems biology for discovery of new biological phenomena Society Online Philip N. Howard, Steve Jones, 2004

In the Middle East the Arab Spring recently highlighted their power and scope from Irag to Morocco exposing how family and clan networks wield influence behind institutional facades While many studies of Middle Eastern societies solely analyse formal structures and official governing bodies this book illuminates longstanding informal social systems by examining the sociopolitical history of the Palestinian highlands known from 1950 as the West Bank By studying family based networks in cities like Jerusalem Nablus and Hebron Harel Chorev Halewa shows how their influence has receded more slowly and less dramatically in recent generations than is commonly believed He also connects individual elite families to the broader landscape of informal networks comprising inter familial alliances collective economic systems Sufi orders and customary law all of which make up the unseen familial order Unfolding chronologically this book spans a period of immense change from the Late Ottoman

period to the present day asking How did Palestinian informal networks adapt to new realities Why and how did they endure And what does this say about modern Palestinian national politics in particular and Arab societies in general Offering an original and innovative look at informal networks in Palestine this study is of crucial importance to scholars of Middle East studies Palestine studies political science and anthropology **Prosopography Approaches and Applications** K. S. B. Keats-Rohan, 2007 This collection of 29 essays ranging from ancient to modern history and including Arabic Islamic prosopography covers all aspects of prosopography as currently practised **Cross-Border Networks in Writing Studies** Derek Mueller, Andrea Williams, 2017-02-18 Cross Border Networks in Writing Studies coordinates mixed methods approaches to survey interview and case study data to study Canadian writing studies scholars The authors argue for networked disciplinarity the notion that ideas arise and flow through intellectual networks that connect scholars not only to one another but to widening networks of human and nonhuman actors Although the Canadian field is historically rooted in the themes of location and national culture expressing a tension between Canadian independence and dependence on the US field more recent research suggests a more hybridized North American scholarship rather than one defined in opposition to rhetoric and composition in the US In tracing identities roles and rituals of nationally bound considerations of how disciplinarity has been constructed through distant and close methods this multi scaled multi scopic approach examines the texture of interdependent constructions of the Canadian discipline Cross Border Networks in Writing Studies also launches a collaborative publishing network between Canadian publisher Inkshed and US publisher Parlor Press Networks. **Terrorism and Global Insurgency** Robert J. Bunker, 2014-01-14 This new book brings together leading terrorism scholars and defence professionals to discuss the impact of networks on conflict and war Post modern terrorism and topics of global insurgency are also comprehensively covered The text is divided into four sections to cover the key areas introductory overview theory terrorism and global insurgency Al Qaeda focus and networks Eminent contributors include John Arquilla and David Ronfeldt Brian Jenkins Stephen Sloan Graham Turbiville and Max Manwaring This book was previously published as a special issue of the leading journal Low Intensity Conflict and Law Enforcement Mobilities, Networks, **Geographies** Jonas Larsen, John Urry, 2016-05-06 There have been striking increases in both long distance travel and in communications through mobile phones text messaging emailing and videoconferencing Such developments in communication along with a similar increase in physical travel and movement of goods around the globe reconfigure social networks by disconnecting and reconnecting people in new ways This original book puts forward one of the first social science studies of the geographies of social networks and related mobilities of travel communications and face to face meetings The book examines five interdependent mobilities that form and reform these geographies of networks and travel in the contemporary world These are physical travel of people for work leisure pleasure migration and escape physical movement of objects delivered to producers consumers and retailers imaginative travel elsewhere through images and

memories seen on texts TV computer screens and film virtual travel on the internet and communicative travel through letters cards telegrams telephones faxes text messages and videoconferences. In the book the authors examine the interconnections between these different mobilities. They research how travel and social meetings require systems of coordination using virtual and communicative travel in between physical travel and meetings. They argue that while it might be imagined that there would be less need of physical meetings with improved technology on the contrary scheduled visits and meetings have become highly significant. The research shows that they are necessary to social life in the contemporary world both within business and especially within families and friendships which are increasingly conducted at a distance. Swarming

Landscapes. Rob Roggema, 2012-12-02. This book advocates a fresh approach to planning that anticipates rather than reacts to the changes in climate currently in process. Today s spatial planning procedures rely on historical evidence instead of preparing for factors that by definition lie in the future yet which are relatively uncontroversial shortages of water sea level rise and rises in average temperatures being but three examples Arguing for more flexibility the contributors view complexity as the key to transforming the way we plan in order to better equip us to face uncertainties about our future environment.

Structure in Complex Networks Jörg Reichardt, 2008-11-24 In the modern world of gigantic datasets which scientists and practioners of all fields of learning are confronted with the availability of robust scalable and easy to use methods for pattern recognition and data mining are of paramount importance so as to be able to cope with the avalanche of data in a meaningful way This concise and pedagogical research monograph introduces the reader to two specific aspects clustering techniques and dimensionality reduction in the context of complex network analysis The first chapter provides a short introduction into relevant graph theoretical notation chapter 2 then reviews and compares a number of cluster definitions from different fields of science In the subsequent chapters a first principles approach to graph clustering in complex networks is developed using methods from statistical physics and the reader will learn that even today this field significantly contributes to the understanding and resolution of the related statistical inference issues Finally an application chapter examines real world networks from the economic realm to show how the network clustering process can be used to deal with large sparse datasets where conventional analyses fail Towards a Typology of Poetic Forms Jean-Louis Aroui, Andy Arleo, 2009 Metrics is often defined as a discipline that concerns itself with the study of meters In this volume the term is used in a broader sense that more or less coincides with the traditional notion of versification Understood this way metrics is an eminently complex object that displays variation over time and in space that concerns forms of a great variety and with different statuses meters rhymes stanzas prescribed forms syllabification rules nursery rhymes slogans musical textsetting ablaut reduplication etc and that as a cultural manifestation is performed in a variety of ways sung chanted spoken read that can have direct consequences on how it is structured This profusion of forms is thought to correspond at the level of perception to a limited number of cognitive mechanisms that allow us to perceive and to represent regularly iterating forms This volume proposes a

relatively coherent overall vision by distinguishing four main families of metrical forms each clearly independent of the others and amenable to separate typologies **Sustainability Science** Bert de Vries,2023-12-07 Thoroughly updated integrated transdisciplinary approach to sustainable development for advanced students researchers and policymakers

Complexity and Healthcare Organization David Kernick, 2018-04-19 Statistics and evidence based medicine are assessed in most postgraduate and undergraduate medical examinations and degrees in health sciences All clinicians have to acquire skills in this area This book aims to provide a brief overview of basic medical statistics and the numerical aspects of evidence based medicine to give realistic worked examples to illustrate the interpretation of studies relevant to clinical practice and to allow examination practice It aims to cover all major topics covered in the undergraduate and postgraduate examinations Each chapter begins with an overview and summary of the main points followed by worked examples and exercises with full answers It will be ideal for all postgraduate medical examination candidates Other clincians and undergraduate students in medicine and health sciences will also find it useful **Computer Supported Collaborative Learning 2005** Timothy Koschmann, 2017-10-03 The Computer Supported Collaborative Learning CSCL conference has become an internationally recognized forum for the exchange of research findings related to learning in the context of collaborative activity and the exploration of how such learning might be augmented through technology. This text is the proceedings from CSCL 2005 held in Taipei Taiwan This conference marked the 10th anniversary of the first CSCL Conference held at Indiana University in 1995 Subsequent meetings have been held at the University of Toronto Stanford University University of Maastricht Netherlands University of Colorado at Boulder and the University of Bergen Norway Just as the first CSCL conference was instrumental in shaping the trajectory of the field in its first decade the conference in Taipei will play an important role in consolidating an increasingly international and interdisciplinary community and defining the direction of the field for the next 10 years. This volume and the papers from which it is comprised will be an important resource for those active in this area of research and for others interested in fostering learning in settings of collaboration
