The capacity of wind power generation in Japan now exceeds 400 000 kW. Renewable Portfolio Standard (RPS), the law obliging the electric power suppliers to introduce renewable energy, was put into effect in April 2003, and the concerned ministries and agencies have begun to consider deregulation for wind power generation in ports and harbors, state-owned forests and parks. Government and business are united in promoting development of wind power generation with the aim of 3 000 000 kW by 2010. In view of this trend, Mitsubishi Heavy Industries, Ltd. (MHI) is developing new wind turbines. This paper introduces the development and operation of the 1 000 kW wind turbine MWT-1000A which was put into commercial operation in the United States in December 2002, and the MWT-S2000, Japan's first 2 000 kW class wind turbine.

1. Introduction

Against the global background of environmental protection, the world's wind power business is growing at an annual rate of over 30 percent (**Fig. 1**). In Japan, the total capacity had reached about 420 000 kW by the end of 2002. This movement is further encouraged by the institution of RPS and deregulation of harbors and state-owned forests.

MHI has been developing new wind turbines to meet such market needs and contributing to the solution of environmental problems in Japan. This paper introduces the high-performance 1 000 kW wind turbine MWT-1000A and Japan's first 2 000 kW class turbine MWT-S2000. Specifications are shown in **Table 1**.
