Paradox Evolution Relationship Selection Reproduction:

The Paradox of Evolution Stephen Rothman, 2015 In this book psychologist Stephen Rothman exposes a major through remarkably almost completely neglected problem with Darwin's theory of evolution Its two essential elements natural selection and reproduction are in important respects contradictory In considering their relationship Rothman makes the revolutionary claim that the evolution of life's complex and diverse reproductive mechanisms is not the consequence of natural selection In so doing he exposes the deepest question possible about life's nature its reason for being In meticulously detailed but accessible terms he lays out the crux of the paradox and offers an intriguing solution within a naturalistic framework In an ostensibly purposeless universe somehow purposeful life has evolved For all living things there are two overarching purposes survival and the creation of new life Natural selection is about the survival of existing life but has no interest in life's future whether it persists or perishes By contrast reproduction is only about the future of life and has no interest in existing life except as a means to an end Where do these purposes come from As Rothman demonstrates at every level life is wired to react to danger Counterintuitively without danger life would neither have come into being nor evolved In the same way death drives the creation of new life and has propelled the evolution of the mechanisms of reproduction Written with great clarity and informed by deep learning this elegant thoughtful work tackles some of the most challenging questions raised by the theory of evolution Page 4 Cover

Evolution of Animal Behavior Matthew H. Nitecki, Jennifer A. Kitchell, 1986 This volume highlights current research in the field of animal behavior with an emphasis on evolutionary perspectives The contributors represent paleontological field and experimental approaches They focus on a series of studies that confront wide ranging issues including sexual selection mate choice differential parental investment apparent altruism cooperative behavior and the relevance of phylogenetic constraints and historical information The volume will be of special interest to evolutionary biologists behavioral ecologists and paleontologists

Evolutionary Medicine Edward P. Bass Professor of Ecology and Evolutionary Biology Stephen C. Stearns, David W. Wallace Professor of Immunobiology Ruslan Medzhitov, 2024-07 With recent updates the second edition of *Evolutionary Medicine* presents general principles of evolutionary biology and organismal design then applies them to medical issues where these principles bring useful insights

Mating Systems and Strategies Stephen M. Shuster, Michael J. Wade, 2019-12-31 This book presents the first unified conceptual and statistical framework for understanding the evolution of reproductive strategies Using the concept of the opportunity for sexual

selection the authors illustrate how and why sexual selection though restricted to one sex and opposed in the other is one of the strongest and fastest of all evolutionary forces They offer a statistical framework for studying mating system evolution and apply it to patterns of alternative mating strategies In doing so they provide a method for quantifying how the strength of sexual selection is affected by the ecological and life history processes that influence females spatial and temporal clustering and reproductive schedules Directly challenging verbal evolutionary models that attempt to explain reproductive behavior without quantitative reference to evolutionary genetics this book establishes a more solid theoretical foundation for the field Among the weaknesses the authors find in the existing data is the apparent ubiquity of condition dependent mating tactics They identify factors likely to contribute to the evolution of alternative mating strategies which they argue are more common than generally believed and illustrate how to measure the strength of selection acting on them Lastly they offer predictions on the covariation of mating systems and strategies consider the underlying developmental biology behind male polyphenism and propose directions for future research Informed by genetics this is a comprehensive and rigorous new approach to explaining mating systems and strategies that will influence a wide swath of evolutionary biology

Reproductive Biology of Teleost Fishes Robert J. Wootton, Carl Smith, 2014-12-03

Reproductive Biology of Teleost Fishes is the first integrated review of the reproductive biology of the bony fishes which are the most

species rich and diversified group of vertebrates Teleosts display remarkable variation in their modes of reproduction and this volume is intended to provide a framework for understanding the remarkable reproductive diversity of this group It describes their reproductive biology using wherever possible phylogenetic analyses and life history theory as a means to interpret the information The book addresses the genetic physiological behavioural ecological evolutionary and applied aspects of teleost reproduction in a comparative framework that emphasises the adaptive basis of reproductive diversity Reproductive Biology of Teleost Fishes provides a comprehensive synthesis of fish reproduction that will be of great interest to life scientists particularly ecologists evolutionary biologists physiologists and advanced undergraduates postgraduates and research workers requiring a comprehensive overview of fish reproduction The book is suitable for courses in fish biology and ecology reproductive physiology and reproductive genetics It also addresses applied questions and will be of value for courses on fisheries science and aquaculture Libraries in all universities and research establishments where biological sciences fisheries science and aquaculture are studied and taught should have several copies of this important book on their shelves

The SAGE Encyclopedia of Lifespan Human Development Dr Marc Bornstein, Marc H. Bornstein, 2018-01-15 In approximately 800 signed articles by experts from a wide diversity of fields this encyclopedia explores all individual and situational factors related to human development across the lifespan

Family Relationships Catherine A. Salmon, Todd K. Shackelford, 2008 Kinship ties the close relationships found within the family have been a central focus of evolutionary biological analyses of social behavior ever since biologist William Hamilton extended the concept of Darwinian fitness to include an individual's actions benefiting not only his own offspring but also collateral kin Evolutionary biologists consider organisms not only reproductive strategists but also nepotistic strategists If a person's genes are just as likely to be reproduced in her sister as in her daughter then we should expect the evolution of sororal investment in the same way as one expects maternal investment This concept has revolutionized biologists' understanding of social interaction and developmental psychologists' understanding of the family However kinship ties have largely been ignored in other areas of psychology particularly social psychology Family Relationships brings together leading theorists and researchers from evolutionary psychology and related disciplines to illustrate the ways in which an evolutionary perspective can inform our study and understanding of family relationships The contributors argue that family psychology is relationship specific the relationship between mother and daughter is different from that between father and daughter or that between brother and sister or sister and sister In other words humans have evolved specialized mechanisms for processing information and motivating behavior that deal with the distinct demands of being a mate father mother sibling child or grandparent Such an evolutionary perspective on family dynamics provides a unique insight into human behavior This volume will be an indispensable resource for psychologists sociologists and anthropologists as well scholars of family marriage and animal behavior

Reproductive Ecology of Flowering Plants: Patterns and Processes Rajesh Tandon, K. R. Shivanna, Monika

Koul,2020-08-07 Sexual reproduction is the predominant mode of perpetuation for flowering plant species Investigating the reproductive strategies of plants has grown to become a vast area of research and in crop plants covers events from flowering to fruit and seed development in wild species it extends up to seed dispersal and seedling recruitment Thus reproduction determines the extent of yield in crop plants and in wild plants also determines the efficacy of recruiting new adults to the population making this field important both from fundamental and applied plant biology perspectives Moreover in light of the growing concerns regarding food and nutritional security for the growing population and preserving biological diversity reproductive biology of flowering plants has acquired special significance Extensive studies on various facets of reproduction are being carried out around the world However these studies are scattered across research journals and reviews from diverse areas of biology The present volume covers the whole spectrum of reproductive ecology from phenology and floral biology to sexuality and pollination biology ecology including floral rewards breeding systems apomixis and seed dispersal In turn transgene flow its biosafety and mitigation approaches and the global pollinator crisis which has become a major international concern in light of the urgent need to sustain crop yield and biodiversity are discussed in detail Given its scope the book offers a valuable resource for students teachers and researchers of botany zoology ecology agriculture and forestry as well as conservation biologists **Fish Reproductive Biology** Tore Jakobsen,Michael J. Fogarty,Bernard A.

Megrey,Erlend Moksness,2016-03-21 Fish recruitment is a key process for maintaining sustainable fish populations In the marine environment fish recruitment is carried out in many different ways all of which have different life history strategies The objective of this book is to argue for greater linkages between basic and applied research on fisheries recruitment and assessment and management of exploited fish stocks Following an introductory chapter this second edition of Fish Reproductive Biology is organized into 3 main sections Biology Population Dynamics and Recruitment Information Critical to Successful Assessment and Management Incorporation of Reproductive Biology and Recruitment Considerations into Management Advice and Strategies The authors collectively bring a wide range of diverse experience in areas of reproductive biology fisheries oceanography stock assessment and management Fully updated throughout the book will be of great interest to a wide audience It is useful as a textbook in graduate and undergraduate courses in fisheries biology fisheries science and fisheries resource management and will provide vital information for fish biologists fisheries scientists and managers

The Zoological Record, 2003 *Fish Energetics* Peter Tytler, Peter Calow, 2012-12-06 It is almost thirty years since Professor G G Winberg established the basis for experimental studies in fish energetics with the publication of his monograph *Rate of Metabolism and Food Requirements of Fishes* His ultimate aim was to develop a scientific approach to fish culture and management and the immense volume of literature generated in the ensuing years has been mainly in response to the demand for information from a rapidly expanding world wide aquaculture industry and to the shortcomings of contemporary practices in fisheries management The purpose of this book is not to review this literature comprehensively but assuming an informed readership to focus attention on topics in which new knowledge and theory are beginning to be applied in practice Most emphasis has been placed on food feeding production growth and reproduction and

energy budgeting as these have most influence on the development of fish culture Some chapters offer practical advice for the selection of methods and warn of pitfalls in previous approaches In others the influence of new theory on the interpretation of studies in fish energetics is discussed in the context of resource allocation and adaptation We hope that the scope of material presented here will have sufficient interest and value to help significantly to fulfil Winberg s original objectives Human Reproductive Behaviour Laura Betzig, Monique Borgerhoff Mulder, Paul Turke, 1988-03-31
