## **Parasites And Their Vectors A Special Focus On Southeast Asia:**

*Parasites and their vectors* Yvonne Ai Lian Lim, Indra Vythilingam, 2014-01-29 Southeast Asia is a region where a myriad of infections are endemic. It is a hotspot region for parasitic diseases. Currently, information on parasitic infections and vectors found in Southeast Asia is sporadic, and there has been no attempt to extensively collate and integrate these data. Gaps in our knowledge, which include disease patterns, transmission dynamics, and vectors, still exist. This book highlights parasitic diseases that are peculiar to Southeast Asia, pinpoints similarities and differences between disease patterns in the respective member countries, and provides information on new emerging parasitic diseases in this region. Critically, this book will heighten understanding of parasitic diseases and their vectors in this diverse region, and this knowledge will be significant for future regional research efforts in this field. , *Towards Malaria Elimination* Sylvie Manguin, Vas Dev, 2018-07-18 *Towards Malaria Elimination: A Leap Forward* was started to mark the occasion for renewed commitment to end malaria transmission for good. The WHO's call for a Malaria Free World by 2030. This book is dedicated for the benefit of researchers, scientists, program and policy managers, students, and anyone interested in malaria and other mosquito-borne diseases with the goal of sharing recent information on success stories, innovative control approaches, and challenges in different regions of the world. Some main issues that emerged included multidrug-resistant malaria and pandemic risk, vaccines, cross-border malaria, asymptomatic parasite reservoir, the threat of *Plasmodium vivax* and *Plasmodium knowlesi*, insecticide resistance in *Anopheles* vectors, and outdoor malaria transmission. This book is one little step forward to bring together in 17 chapters the experiences of malaria expert researchers from five continents to present updated information on disease epidemiology and control at the national/regional level, highlighting the constraints, challenges, accomplishments, and prospects of malaria elimination. *Medical Parasitology* Rohela Mahmud, Yvonne Ai Lian Lim, Amirah Amir, 2018-01-31 This textbook will provide a systematic comprehension of the various medically important human parasites, their distribution, habitat, morphology, and life cycle, pathogenesis, and clinical features, laboratory diagnosis, treatment, prevention, and control. The main emphasis is on the protozoan and helminthic diseases, also medical entomology covering vectors relevant to these diseases. The book aims to promote an easy yet comprehensive way of learning parasitology. It attempts to break down the complexity of medical parasitology into parts that are easy to understand yet integrating the essential information of parasitic infections. The integration of knowledge of parasites will be achieved through student-friendly illustrations, inclusion of a collection of recent case reports, examples of test questions and scenarios, and the images of human parasites. Essentially, it provides a one-stop learning package for medical parasitology. **Clinical Naturopathic Medicine** Leah Hechtman, 2018-09-19 New chapters: Diagnostics, Case taking and treatment, and Nutritional medicine. **Lymphatic Filariasis** Brij Kishore Tyagi,2018-11-03

Lymphatic Filariasis LF is a group of human and animal infectious diseases caused by nematode parasites of the order Filariidae. Often neglected, it is one of the oldest and the most debilitating tropical diseases. NTDs transmitted from human to human by mosquitoes, bites particularly the brown black mosquito known as *Culex quinquefasciatus*. LF is a major public health problem in many parts of the tropics, especially India, which accounts for as much as 40% of total global cases. As a leading cause of permanent and long-term disability worldwide, the parasite infection imposes a severe physical and socioeconomic burden. The World Health Organization (WHO) estimates that 1.4 billion people live in high-risk areas, 120 million of which are already infected with LF, including 22 million children below the age of 15 and about 76 million who suffer from damaged lymphatic and renal systems. India has made great strides toward eliminating the disease, and these advances are of global significance. They include early diagnosis mechanisms, vaccine product development, detection of parasites in the vector, and studies on parasite evolution trends in nature as warning signals. Reports on the successes and failures are needed to enable measures to be taken to avoid disaster and ensure a smooth transition from endemicity in India to the elimination of lymphatic filariasis by 2020. This book, which gathers highly original contributions on various subjects related to lymphatic filariasis, discusses the latest scientific research that will help the nation to achieve this milestone. It also serves as a guide to many other countries struggling against this highly debilitating and incapacitating disease.

**Anopheles mosquitoes** Sylvie Manguin,2013-07-24

*Anopheles* mosquitoes are highly important insects due to their involvement in the transmission of human malaria and its devastating consequences in endemic countries worldwide. In 2010 alone, malaria was responsible for an estimated 660,000 deaths. As the study of *Anopheles* species and populations is a key element for reaching the goal of malaria elimination, an enormous amount of information has accumulated over the past century, and together in recent decades with the advent of novel technologies, the acquisition of new knowledge has accelerated even further. The originality of this book is to offer the latest compilation on various research, new concepts, paradigms, and innovative approaches for the control of anophelines, using state-of-the-art methodologies and analysis. The 24 chapters, written by internationally recognized experts from 5 continents, cover the rich landscape for the understanding of *Anopheles* mosquitoes and the development of more effective weapons to control the vector of malaria.
