### **Decoding The Rise Of Made-in-china: Why The Continuity Of Catch-up Ladder Ultimately Matters** Bin

Guo,2023-03-23 This book provides a novel theoretical framework to explain the real source of competitive advantage of Chinese manufacturing More importantly such a framework can be generalized to analyze the potential of catch up for large emerging economies in the globalization era The book also provides insights for policy makers to rethink their design of policies The rise of Made in China products has been widely attributed to low labour cost advantage and imitation advantage However as these two advantages are nearly innate to all late developing countries they cannot be regarded as the key factors that drive the rapid growth of China s manufacturing industry or China s economy over the past few decades In this book the author proposed a theory the catch up ladders theory to explain the rise of China s manufacturing industry The manufacturing advancement of any country is in essence a process of catching up in both market and technology during which enterprises will form a ladder like holistic structure due to their differences in capabilities technology and market positioning In light of this the continuity of the catch up ladder will greatly determine the catch up efficiency of an industry and even a country at large Such a perspective is more applicable to large emerging economies especially those with over one hundred million population and thus huge potential domestic market demand **Daily Graphic** Ransford
