

The background of the cover is a photograph of an industrial facility. Two tall, dark smokestacks are visible, each emitting a thick, white plume of smoke that rises into the sky. The smoke plumes are large and billowing, filling much of the upper half of the image. The sky is a clear, pale blue. In the foreground, the dark silhouette of industrial buildings and structures is visible against the base of the smokestacks.

*Respiratory Health Effects of Airborne Hazards Exposures in the Southwest Asia Theater of Military Operations* National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on the Respiratory Health Effects of Airborne Hazards Exposures in the Southwest Asia Theater of Military Operations, 2020-10-23 More than 3.7 million U.S. service members have participated in operations taking place in the Southwest Asia Theater of Military Operations since 1990. These operations include the 1990-1991 Persian Gulf War, a post-war stabilization period spanning 1992 through September 2001, and the campaigns undertaken in the wake of the September 11, 2001 attacks. Deployment to Iraq, Kuwait, Saudi Arabia, Bahrain, Gulf of Aden, Gulf of Oman, Oman, Qatar, the United Arab Emirates, and Afghanistan exposed service members to a number of airborne hazards including oil well fire, smoke emissions from open burn pits, dust and sand suspended in the air, and exhaust from diesel vehicles. The effects of these were compounded by stressors like excessive heat and noise that are inevitable attributes of service in a combat environment. *Respiratory Health Effects of Airborne Hazards Exposures in the Southwest Asia Theater of Military Operations* reviews the scientific evidence regarding respiratory health outcomes in veterans of the Southwest Asia conflicts and identifies research that could feasibly be conducted to address outstanding questions and generate answers. Newly emerging technologies that could aid in these efforts and organizations that the Veterans Administration might partner with to accomplish this work.

**Monitoring, Control and Effects of Air Pollution** Andrzej Chmielewski, 2011-08-23 The book addresses the subjects related to the selected aspects of pollutants emission monitoring and their effects. The most of recent publications concentrated on the review of the pollutants emissions from industry, especially power sector. In this one, emissions from open-pit mining and transport are addressed as well. Besides of SO<sub>x</sub> and NO<sub>x</sub> emissions, small particles and other pollutants, e.g., VOC, ammonia, have adverse effect on environment and human being. The natural emissions, e.g., from volcanoes, has contribution to the pollutants concentration and atmospheric chemistry governs speciation of pollutants as in the case of secondary acidification. The methods of ambient air pollution monitoring based on modern instrumentation allow the verification of dispersion models and balancing of mass emissions. The comfort of everyday human's activity is influenced by indoor and public transport vehicles interior air contamination which is effected even by the professional appliances operation. The outdoor pollution leads to cultural heritage objects deterioration; the mechanisms are studied and the methods of rehabilitation developed. However, to prevent emissions, the new technologies are being developed. The new class of these technologies are plasma processes which are briefly reviewed at the final part of the book.

Committee on Science,1999      Particles and Health 2021: an International Conference Addressing Issues in Science and Regulation Robert McCunney,Nils Krueger,Len Levy,Kevin Driscoll,Paul Borm,2023-01-30

Particles and Health is an international conference taking place in October 2021 addressing issues in science and regulation Regulatory initiatives in the European Union EU have suggested uniform hazard classifications for all poorly soluble low toxicity particles PSLTs Examples of PSLTs include carbon black titanium dioxide and iron oxide among others Approaches have also been proposed for setting workplace exposure limits for PSLTs such as those of the German MAK Commission The conference will include specific sections over a two day period of about 25 presentations associated with PSLTs regarding the following major topics

- 1 human studies
- 2 animal inhalation studies associated with lung cancer
- 3 animal and human studies associated with non pulmonary impacts including reproductive genetic and cardiac effects and
- 4 regulatory application of scientific studies

This conference will include presentations regarding Definition of PSLT s with attention to both similarities and differences among these substances Address scientific studies regarding human health effects of PSLTs The value of human studies over animal studies when human exposed populations can be studied adequately will be emphasized Address translational toxicology challenges including the appropriateness of rats as models for human lung pathogenesis particularly lung cancer in light of lung overload phenomena and species differences Serve as a platform to present current scientific information about PSLTs important for regulatory action Publication of pertinent conference presentations in the peer reviewed scientific literature will allow the presentations to live beyond the conference and subsequently be reviewed part of regulatory deliberations Establish an interdisciplinary setting for industry academia and regulatory professionals to interact on an important topic Such interaction can facilitate enhanced understanding of the science and ideally more appropriate regulations appropriate classification and labeling as well as for setting exposure limits among others Recommend areas for further clarifying research regarding the significance of the rat as a model for translation toxicology The goal of this conference is to present current scientific evidence regarding the numerous dimensions of particles and health and to facilitate interaction and discussions among attendees with expertise in toxicology epidemiology occupational and pulmonary medicine and exposure assessment Interactions between these disciplines will aid in the sound and evidence based scientific underpinning of regulatory considerations regarding PSLTs Although regulatory concern regarding PSLTs has focused on lung cancer risk as a result of rat inhalation overload studies this conference will address all relevant health end points including genetic and reproductive issues as well consistent with ECHA guidelines Sample of Topics related to substances that may be characterized as PSLTs including carbon black coal titanium dioxide cerium oxide aluminum oxide barium sulfate and iron

oxide among others Defining PSLTs Epidemiological studies of PSLTs Inhalation studies evaluating human cellular response to particles Basic research studies on inflammatory to malignancy pathways Animal studies PLSTs and human risk New Insights into old data New studies on PSLTs 2 year carcinogenicity assays Animal studies and gender specific responses to PSLTs How does the USA National Cancer Institute NCI and National Institute of Environmental Health Sciences NIEHS address this challenge of extrapolating rodent data to human risk assessment Role of the rodent model in human risk assessment of PSLTs and lung cancer risk Adverse Outcome Pathways AOPs and Modes of Action MOA identification and recommendations for closing gaps in knowledge for rodents and humans Are there lessons to be learned from how the pharmaceutical industry s approach to translational science safety and efficacy as evolved in recent years Setting exposure limits for PSLTs and Translational Toxicology Genotoxicity and Reproductive toxicity studies of PSLTs
