Parasites In Ecological Communities From Interactions To Ecosystems Ecology Biodiversity And Conservation:

Parasites in Ecological Communities Melanie J. Hatcher, Alison M. Dunn, 2014-05-14 Interactions between competitors predators and their prey have traditionally been viewed as the foundation of community structure Parasites long ignored in community ecology are now recognized as playing an important part in influencing species interactions and consequently affecting ecosystem function Parasitism can interact with other ecological drivers resulting in both detrimental and beneficial effects on biodiversity and ecosystem health Species interactions involving parasites are also key to understanding many biological invasions and emerging infectious diseases This book bridges the gap between community ecology and epidemiology to create a wide ranging examination of how parasites and pathogens affect all aspects of ecological communities enabling the new generation of ecologists to include parasites as a key consideration in their studies This comprehensive guide to a newly emerging field is of relevance to academics practitioners and graduates in biodiversity conservation and population management and animal and human health

Ecology and

Management of the African Buffalo Alexandre Caron, Daniel Cornélis, Philippe Chardonnet, Herbert H. T. Prins, 2023-11-23 One of iconic Africa's Big Five the African buffalo is the largest African bovine or antelope that occurs throughout most of sub-Saharan Africa and in a wide range of ecosystems from savanna to rainforest The African buffalo is also one of the most successful large African mammals in terms of abundance and biomass This species thus represents a powerful model to enhance our understanding of African biogeography and wildlife conservation ecology and management Edited by four researchers experienced in different aspects of the African buffalo's biology this volume provides an exhaustive compilation of knowledge on an emblematic species that stands out as an important component of African natural and human ecosystems It delivers a global view of the African buffalo and all known aspects of its ecology and management This book will appeal to students scholars scientists and wildlife managers as well as those enthusiastic about the charismatic species This title is also available as Open Access on Cambridge Core

Ecological-Economic Modelling for Biodiversity Conservation Martin Drechsler, 2020-03-26 Presents the state of the art of model based integration of ecology and economics in the field of biodiversity conservation

Freshwater Biodiversity David Dudgeon, 2020-05-21 Fresh waters are disproportionately rich in species and represent global hotspots of biodiversity However they are also hotspots of endangerment

Natural Resource Management Reimagined Robert G. Woodmansee, John C. Moore, Dennis S. Ojima, Laurie Richards, 2021-03-11 Brings scientists policy makers land and water managers and citizen stakeholders together to resolve natural resource and environmental problems

Parasitism and Ecosystems Frédéric Thomas, François Renaud, Jean-François Guegan, 2005-01-06 For several years there has been a growing interest in understanding the dynamics of parasites in ecosystems as well as the diversity of ways in which they influence ecosystem functioning through their effects on host populations and communities Ecologists epidemiologists evolutionary biologists and other scientists are increasingly coming to realise that parasites must be taken into account when studying ecosystems *Parasitism and Ecosystems* summarizes current knowledge on this topic providing a comprehensive overview for researchers and students It represents the first synthesis of both the roles and the consequences of pathogens in ecosystems utilising well documented case studies to illustrate the main issues as well as identifying prospects for future research

Water Resources Joseph Holden, 2013-10-01 The world faces huge challenges for water as population continues to grow as emerging economies develop and as climate change alters the global and local water cycle There are major questions to be answered about how we supply water in a sustainable and safe manner to fulfil our needs while at the same time protecting vulnerable ecosystems from disaster *Water Resources An Integrated Approach* provides students with a comprehensive overview of both natural and socio-economic processes associated with water The book contains chapters written by 20 specialist contributors providing expert depth of coverage to topics The text guides the reader through the topic of water starting with its unique properties and moving through environmental processes and human impacts upon them including the changing water cycle water movement in river basins water quality groundwater

and aquatic ecosystems The book then covers management strategies for water resources water treatment and re use and the role of water in human health before covering water economics and water conflict The text concludes with a chapter that examines new concepts such as virtual water that help us understand current and future water resource use and availability across interconnected local and global scales This book provides a novel interdisciplinary approach to water in a changing world from an environmental change perspective and inter related social political and economic dimensions It includes global examples from both the developing and developed world Each chapter is supplemented with boxed case studies end of chapter questions and further reading as well as a glossary of terms The text is richly illustrated throughout with over 150 full colour diagrams and photos

Parasite Biodiversity Robert Poulin, Serge Morand, 2014-05-27 This comprehensive groundbreaking book on the biodiversity of parasites offers a clear and accessible explanation of how parasite biodiversity provides insight into the history and biogeography of other organisms the structure of ecosystems and the processes that lead to the diversification of life

Plant Conservation Science and Practice Stephen Blackmore, Sara Oldfield, 2017-08-03 This book focuses on global efforts to protect plant diversity and the role that botanic gardens play in conserving plant species

Marine Ecosystems Tasman P. Crowe, Chris Frid, 2015-06-18 A critical synthesis of key concepts for understanding human impacts on marine ecosystems and for decision making based on ecosystem services

Animal Population Ecology T. Royama, 2021-04-22 The fundamental concepts of animal population are misunderstood this book draws a road map to the future development of ecology

The Life, Extinction, and Rebreeding of Quagga Zebras Peter Heywood, 2022-05-19 Quaggas were beautiful pony sized zebras in southern Africa that had fewer stripes on their bodies and legs and a browner body coloration than other zebras Indigenous people hunted quaggas portrayed them in rock art and told stories about them Settlers used quaggas to pull wagons and to protect livestock against predators Taken to Europe they were admired exhibited harnessed to carriages illustrated by famous artists and written about by scientists Excessive hunting led to quaggas extinction in the 1880s but DNA from museum specimens showed rebreeding was feasible and now zebras resembling quaggas live in their former habitats This rebreeding is compared with other de extinction and rewilding ventures and its appropriateness discussed against the backdrop of conservation challenges including those facing other zebras In an Anthropocene of species extinction climate change and habitat loss which organisms and habitats should be saved and should attempts be made to restore extinct species

Joint Species Distribution Modelling Otso Ovaskainen, Nerea Abrego, 2020-06-11 Joint species distribution modelling JSMD is a fast developing field and promises to revolutionise how data on ecological communities are analysed and interpreted Written for both readers with a limited statistical background and those with statistical expertise this book provides a comprehensive account of JSMD It enables readers to integrate data on species abundances

environmental covariates species traits phylogenetic relationships and the spatio temporal context in which the data have been acquired Step by step coverage of the full technical detail of statistical methods is provided as well as advice on interpreting results of statistical analyses in the broader context of modern community ecology theory With the advantage of numerous example R scripts this is an ideal guide to help graduate students and researchers learn how to conduct and interpret statistical analyses in practice with the R package Hmsc providing a fast starting point for applying joint species distribution modelling to their own data

Landslide Ecology Lawrence R. Walker, Aaron B. Shiels, 2013 Landslides are dangerous fascinating phenomena understanding their biological and ecological aspects is essential for achieving slope stability and habitat restoration

Invading Ecological Networks Cang Hui, David Richardson, 2022-01-13 Until now biological invasions have been conceptualised and studied mainly as a linear process from introduction to establishment to spread This volume charts a new course for the field drawing on key developments in network ecology and complexity science It defines an agenda for Invasion Science 2.0 by providing new framings and classification of research topics and by offering tentative solutions to vexing problems In particular it conceptualises a transformative ecosystem as an open adaptive network with critical transitions and turnover with resident species heuristically learning and fine tuning their niches and roles in a multiplayer eco evolutionary game It erects signposts pertaining to network interactions structures stability dynamics scaling and invasibility It is not a recipe book or a road map but an atlas of possibilities a hitchhiker's guide

Ecosystem Collapse and Recovery Adrian C. Newton, 2021-04-22 There is a growing concern that many important ecosystems such as coral reefs and tropical rain forests might be at risk of sudden collapse as a result of human disturbance At the same time efforts to support the recovery of degraded ecosystems are increasing through approaches such as ecological restoration and rewilding Given the dependence of human livelihoods on the multiple benefits provided by ecosystems there is an urgent need to understand the situations under which ecosystem collapse can occur and how ecosystem recovery can best be supported To help develop this understanding this volume provides the first scientific account of the ecological mechanisms associated with the collapse of ecosystems and their subsequent recovery After

providing an overview of relevant theory the text evaluates these ideas in the light of available empirical evidence by profiling case studies drawn from both contemporary and prehistoric ecosystems Implications for conservation policy and practice are then examined
