Motion And Vibration Control Selected Papers From Movic 2008:

Motion and Vibration Control Heinz Ulbrich, Lucas Ginzinger, 2008-12-23 Motion and vibration control is a fundamental technology for the development of advanced mechanical systems such as mechatronics vehicle systems robots spacecraft and rotating machinery Often the implementation of high performance low power consumption designs is only possible with the use of this technology It is also vital to the mitigation of natural hazards for large structures such as high rise buildings and tall bridges and to the application of flexible structures such as space stations and satellites Recent innovations in relevant hardware sensors actuators and software have facilitated new research in this area This book deals with the interdisciplinary aspects of emerging technologies of motion and vibration control for mechanical civil and aerospace systems It covers a broad range of applications e g vehicle dynamics actuators rotor dynamics biologically inspired mechanics humanoid robot dynamics and control etc and also provides advances in the field of fundamental research e g control of fluid structure integration nonlinear control theory etc Each of the contributors is a recognised specialist in his field and this gives the book relevance and authority in a wide range of areas *Dynamics of Underactuated Multibody Systems* Robert Seifried, 2013-11-08 Underactuated multibody systems are intriguing mechatronic systems as they possess fewer control inputs than degrees of freedom Some examples are modern light weight flexible robots and articulated manipulators with passive joints This book investigates such underactuated multibody systems from an integrated perspective This includes all major steps from the modeling of rigid and flexible multibody systems through nonlinear control theory to optimal system design The underlying theories and techniques from these different fields are presented using a self contained and unified approach and notation system Subsequently the book focuses on applications to large multibody systems with multiple degrees of freedom which require a combination of symbolical and numerical procedures Finally an integrated optimization based design procedure is proposed whereby both structural and control design are considered concurrently Each chapter is supplemented by illustrated examples **Semi-Discretization for Time-Delay Systems** Tamás Insperger, Gábor Stépán, 2011-07-15 This book presents the recently introduced and already widely referred semi discretization method for the stability analysis of delayed dynamical systems Delay differential equations often come up in different fields of engineering like feedback control systems machine tool vibrations balancing stabilization with reflex delay The behavior of such systems is often counter intuitive and closed form analytical formulas can rarely be given even for the linear stability conditions If parametric excitation is coupled with the delay effect then the governing equation is a delay differential equation with time periodic coefficients and the stability properties are even more intriguing The semi discretization method is a simple but efficient method that is based on the discretization with respect to the delayed term and the periodic coefficients only The method can effectively be used to construct stability diagrams in the space of system parameters Multibody Dynamics Krzysztof Arczewski, Wojciech Blajer, Janusz Fraczek, Marek Wojtyra, 2010-11-08 The

ECCOMAS Thematic Conference Multibody Dynamics 2009 was held in Warsaw representing the fourth edition of a series which began in Lisbon 2003 and was then continued in Madrid 2005 and Milan 2007 held under the auspices of the European Community on Computational Methods in Applied Sciences ECCOMAS The conference provided a forum for exchanging ideas and results of several topics related to computational methods and applications in multibody dynamics through the participation of 219 scientists from 27 countries mostly from Europe but also from America and Asia This book contains the revised and extended versions of invited conference papers reporting on the state of the art in the advances of computational multibody models from the theoretical developments to practical engineering applications By providing a helpful overview of the most active areas and the recent efforts of many prominent research groups in the field of multibody dynamics this book can be highly valuable for both experienced researches who want to keep updated with the latest developments in this field and researches approaching the field for the first time Service Robotics and Mechatronics

Keiichi Shirase, Seiji Aoyagi, 2009-10-24 In a world suffering from an ageing population and declining birth rate service robotics and mechatronics have an increasingly vital role to play in maintaining a safe and sustainable environment for everyone Mechatronics can be used in the reconstruction or restoration of various environments which we rely upon to survive for example the reconstruction of a city after an earthquake or the restoration of polluted waters This collection of papers was originally presented at the 7th International Conference on Machine Automation 2008 in Awaji Japan and covers a variety of new trends in service robotics and mechatronics Service Robotics and Mechatronics showcases the latest research in the area to provide researchers and scientists with an up to date source of knowledge and basis for further study as well as offering graduate students valuable reference material Adaptive Regelung aktiver Fahrwerke Sebastian Spirk, 2012-07 Aufgabe der Fahrwerksentwicklung ist es den Zielkonflikt zwischen Fahrkomfort Fahrsicherheit und Einhaltung des Federwegs bestmöglich aufzulösen Die Fahrzeugeigenschaften hinsichtlich Fahrkomfort und Fahrsicherheit Sportlichkeit stellen ein wichtiges Differenzierungsmerkmal im Fahrzeugbau dar und sind Gegenstand ständiger Weiterentwicklung Passive Komponenten werden dabei immer mehr durch aktive Fahrwerkssysteme ersetzt Die Umsetzung vieler moderner Regelungskonzepte für aktive Fahrwerkssysteme scheitert jedoch an den fahrzeugtechnischen Randbedingungen Ziel der in dieser Studie entwickelten vertikaldynamischen Regelungskonzepte ist daher eine transparente und implementierbare Reglerstruktur welche das Potential aktiver Aktuatorik unter Berücksichtigung fahrzeugtechnischer Randbedingungen bestmöglich ausnutzt Grundlage des Regelungskonzepts ist ein Referenzmodell welches das dynamische Verhalten eines Fahrwerks mit variabler Federsteifigkeit und Dämpfung abbildet Dadurch ergibt sich gegenüber einem reinen Verstellmuffersystem ein deutlich erhöhter Adaptionsspielraum zwischen Komfort Fahrsicherheit und Einhaltung des Federwegs ohne sich vom bewährten grundlegenden Fahrverhalten passiver Fahrwerke zu entfernen Neben dem Verzicht auf einen Beobachter und einer damit reduzierten Diskrepanz zwischen theoretischer und praktischer Leistungsfähigkeit konnte

auch eine transparente Parametrierbarkeit für die effiziente Applikation im Fahrzeug erreicht werden. Um seine Umsetzbarkeit und praktische Leistungsfähigkeit zu überprüfen ist das Konzept an einem aktiven Fahrwerk an einem Viertelfahrzeugprüfstand untersucht und validiert worden. Bei der anschließenden Umsetzung auf eine neuartige hybride Kombination aus Serienaktuatoren konnte ohne signifikante Einbußen bei der Leistungsfähigkeit eine deutliche Verringerung des Energieverbrauchs erreicht werden. Mit dem in dieser Arbeit entwickelten Regelungskonzept kann der bei der Fahrwerksabstimmung vorhandene Zielkonflikt zwischen Fahrsicherheit und Fahrkomfort deutlich entschärft werden. Bei der Entwicklung des Regelungskonzepts wurde besonderer Wert auf die Einhaltung der fahrzeugtechnischen Randbedingungen gelegt. Die praktische Anwendbarkeit wurde sowohl durch Messungen am Prüfstand als auch durch die erfolgreiche Übertragung auf eine neuartige Kombination bestehender Fahrwerkskomponenten bewiesen. Durch die Umsetzung auf das hybride Fahrwerk konnte zusätzlich eine deutliche Reduktion des Energieverbrauchs erzielt werden.
