W. Hackett,Yael Fisher,2019-11-01 In this Research Topic the two editors bring together a series of articles that use facet theory and allied approaches to research Since its inception in the work of Louis Guttman in the mid twentieth century facet theory has become an established approach within social science research In addition over the past 70 years a wide range of research publications have appeared operating within the theoretical and analytic rubric of facet theory and for the last two decades a biennial international conference has been held devoted to facet theory research When using a facet theory approach an implicit aim of the research within this framework is to bring together in an explicit manner a clear definition of the content area that is being investigated along with data analysis procedures Integrating the explicit design of research content for example attitudes values etc and its subsequent analysis for example to identify the variables that are influential to respondents in relation to the specific area under investigation allows for the construction of theory relating to the content area and for the meaningful measurement of complex research areas The clear explication of an area of research content is achieved through the use of a mapping sentence MS In a MS all of the pertinent variables called facets associated with the specific subject matter of the research study are specified in the form of a natural language sentence where facets variables are arrange to demonstrate how these theoretically relate to each other Sub levels of facets are defined in such a way as to capture the relationships of research variables facets to each other and the overall research domain Background variables are also stated in the MS along with a specified range over which observations will be made to test the veracity of the structural hypotheses statements regarding the proposed manner in which variables are related to the study s content implicit in the MS Furthermore by using a MS the researcher is able to select variables that appropriately address the area of content Traditionally facet theory has been used in quantitative research but has recently been applied to the analysis of qualitative and philosophical research which incorporates a declarative mapping sentence in such research and which is included in this Research Topic In order to interrogate these structural hypotheses quantitative data analysis procedures are

employed such as Smallest Space Analysis SSA and Partial Order Scalogram Analysis by base Coordinates POSAC In SSA the structure of the content area of interest the variables that have been included in the MS can be interrogated as observations that have been made along the specified outcome range are represented geometrically as partitioned regions in a concept space related to the specific research domain Individual respondents may also be investigated in terms of their profile of facet related scores using POSAC A similar approach is employed when analysing information from qualitative facet theory research which interrogates the structural hypotheses present in the declarative mapping sentence through approaches such as content and narrative analyses This Research Topic presents work from scholars with particular emphasis upon how the approach has developed both theoretically and in terms of its application new areas of application and advances in theory development **Projective Techniques and Sort-Based Research Methods** Paul M.W. Hackett,James M. Suvak,Ava Gordley-Smith,2023-04-05 Projective Techniques and Sort Based Research Methods offers a brief introductory guide to the use of these exciting innovative and often artistic approaches to students and researchers who have no prior knowledge of these This book brings together a wide range of examples of projective and mapping techniques that offer the ideal methodology for researchers wishing to collect less controlled and filtered material that tap the deeper levels of the conscious and sub conscious to reveal a more profound richer and hidden level of response It presents the techniques in a way that will enable the reader to appreciate their nature and to choose an appropriate method for their own research Information is also provided that allows readers to design and implement their own projective or sort based approaches Each of the approaches the authors present are concisely described and their usages explained along with references and examples of the applied usage of the technique The book is valuable reading for researchers from a wide range of academic disciplines from within the social sciences humanities business studies marketing etc The book is an introductory guide but it will be appropriate for use with undergraduate post graduate and research students It will also be of great use to professionals working in the areas of consumer behaviour marketing and communications *Research in Practice for Forensic Professionals* Kerry Sheldon,Jason Davies,Kevin Howells,2012-03-12 This book explores applied research methods used in forensic settings prisons the probation service courts and forensic mental health establishments and provides a comprehensive how to guide for forensic practitioners and researchers It provides practitioners and researchers with grounding in the practical techniques appropriate for research in applied forensic settings This includes knowledge and skills of the research process and the wide range of research methods both quantitative and qualitative being applied in this arena The text provides a critical understanding of the problems challenges and ethical issues which can arise and ideas for managing these Specific attention is paid to empirical research within forensic populations and settings including researching vulnerable groups e g offenders and the mentally ill in secure settings evaluating treatment programmes and the uses and problems of randomised control trials The book is clearly structured with each methodology chapter describing the

background of the approach the type of research questions addressed design principles and issues the types of analysis that can be utilised strengths and limitations of the method future directions and further sources of information Through the inclusion of case studies and illustrative examples from forensic researchers and practitioners who have extensive experience of conducting applied research this book tackles real life problems typically faced by researchers and practitioners Research in Practice for Forensic Professionals is an essential one stop resource for practitioners such as psychologists nursing and medical staff prison and probation workers social workers occupational therapists who have an interest in research and in evaluating their own work and the services in which they work It will also be of interest to students studying areas of applied research such as forensic psychology or applied criminology and those teaching them
