Moisture control in buildings Heinz R.

Trechsel, 1994 Heating, Cooling, Lighting Norbert Lechner, 2014-10-13 Sustainable environmental control through building design Heating Cooling and Lighting is the industry standard text on environmental control systems with the emphasis on sustainable design By detailing the many factors that contribute to the comfort in a building this book helps architects minimize mechanical systems and energy usage over the life of the building by siting building design and landscaping to maximize natural heating cooling and lighting This new fourth edition includes new information on integrated design strategies and designing for the Tropics Resources include helpful case studies checklists diagrams and a companion website featuring additional cases an image bank and instructor materials Designing buildings that require less energy to heat cool and light means allowing the natural energy of the sun and wind to reduce the burden on the mechanical and electrical systems Basic design decisions regarding size orientation and form have a great impact on the sustainability cost and comfort of a building Heating Cooling and Lighting provides detailed guidance for each phase of a design project Readers will Understand the concept of sustainability as applied to energy sources Review the basic principles of thermal comfort and the critical role of climate Learn the fundamentals of solar responsive design including active and passive solar systems as well as photovoltaics Discover how siting architectural design and landscaping can reduce the requirements for mechanical and electrical systems In sustainable design mechanical and electrical systems should be used to only accomplish what the architect could not by the design of the building itself With this in mind designers require a comprehensive understanding of both the properties of energy and the human factors involved in thermal comfort Heating Cooling and Lighting is the complete industry leading resource for designers interested in sustainable environmental control **Water**

Performance Based Building Design 2 Hugo S. L. Hens, 2012-10-11 Just like building physics performance based building design was hardly an issue before the energy crises of the 1970ies With the need to upgrade energy efficiency the interest in overall building performance grew The term performance encompasses all building related physical properties and qualities that are predictable during the design stage and controllable during and after construction The term predictable demands calculation tools and physical models that allow evaluating a design whereas controllable presumes the existence of measuring methods available on site The basis for a system of performance arrays are the functional demands the needs for accessibility safety well being durability energy efficiency and sustainability and the requirements imposed by the usage of a building In continuation of Vol 1 this second volume discusses light weight construction with wooden and metal elements roofing systems facades and ends with finishes and the overall risk analysis Most chapters build on a same scheme overview overall performance evaluation design and construction The work is absolutely recommended to undergraduates and graduates in architectural and building engineering though also building engineers who want to refresh their knowledge may benefit The level of discussion assumes the reader has a sound knowledge of building physics along with a background in structural engineering building materials and building construction Where and when needed input and literature from over the world was used reason why each chapter ends listing references and literature
