Molecular Biology : Diagnostic Principles and Practice David H. (Ed. in Chief) Persing, Fred C. (Ed.) Tenover, James (Ed.) Versalovic, Yi-Wet (Ed.) and etc Tang, 2004 **Core Collection of Medical Books and Journals 2001** Howard Hague, 2000 **Animal Cell Electroporation and Electrofusion Protocols** Jac A. Nickoloff, 2008-02-03 The ability to introduce macromolecules into animal cells including DNA RNA proteins and other bioactive compounds has facilitated a broad range of biological studies from biochemistry and biophysics to molecular biology cell biology and whole animal studies. Gene transfer technology in particular will continue to play an essential role in studies aimed at improving our understanding of the relationships between the gene structure and function and it has important practical applications in both biotechnology and biomedicine as evidenced by the current intense interest in gene therapy. Although DNA and other macromolecules may be introduced into cells by a variety of methods including chemical treatments and microinjection electroporation has proven to be simpler to perform more efficient and effective with a wider variety of cell types than other techniques. The early and broad success of electric field mediated DNA transfer soon prompted researchers to investigate electroporation for transferring other types of molecules into cells including RNA enzymes antibodies and analytic dyes. **Animal Cell Electroporation and Electrofusion Protocols** begins with three chapters that describe the theoretical and practical aspects of electroporation including a review of the commercially available instrumentation. These introductory chapters will be of particular interest to those new to electric field technologies and to those developing protocols for as yet untested species or cell types. Nineteen chapters follow that present well tested protocols for electroporation of proteins and DNA into insect fish and mammalian cells.
