6. Everyone in Squidward's family has light blue skin, which is the dominant trait for body color in his hometown of Squid Valley. His family brags that they are a "purebred" line. He recently married a nice girl who has light green skin, which is a recessive trait. Create a Punnett square to show the possibilities that would result if Squidward and his new bride had children. Use B to represent the dominant gene and b to represent the recessive gene.

	B	B
b	Bb	Bb
b	Bb	Bb

A. List the possible genotypes and phenotypes for their children.

$Bb = \text{blue}$

B. What are the chances of a child with light blue skin? 100 %

C. What are the chances of a child with light green skin? 0 %

D. Would Squidward's children still be considered purebreds? Explain!

No, they would be Heterozygous - Hybrids.
They are now "carriers".

7. Assume that one of Squidward's sons, who is heterozygous for the light blue body color, married a girl that was also heterozygous. Create a Punnett square to show the possibilities that would result if they had children.

	B	b
B	BB	Bb
b	Bb	bb

A. List the possible genotypes and phenotypes for their children.

$BB + Bb = \text{blue} + bb = \text{green}$

B. What are the chances of a child with light blue skin? 75 %

C. What are the chances of a child with light green skin? 25 %

8. Mr. Krabbs and his wife recently had a Lil' Krabby, but it has not been a happy occasion for them. Mrs. Krabbs has been upset since she first saw her new baby who had short eyeballs. She claims that the hospital goofed and mixed up her baby with someone else's baby. Mr. Krabbs is homozygous for his tall eyeballs, while his wife is heterozygous for her tall eyeballs. Some members of her family have short eyes, which is the recessive trait. Create a Punnett square using T for the dominant gene and t for the recessive one.

	T	T
T	TT	TT
t	Tt	Tt

A. List the possible genotypes and phenotypes for their children.

$TT + Tt = \text{Tall eyeballs}$

~~tt~~ none

B. Did the hospital make a mistake? Explain your answer.

yes, you need two parents who both have the ~~recessive~~ recessive trait to have a child that has both "little t's" - The hospital messed up!

The Molecular Genetics of Aging Siegfried Hekimi, 2012-12-06 The molecular genetics of aging or life span determination is an expanding field One reason is because many people would consider it desirable if human life span could be extended Indeed it is difficult not to be fascinated by tales of the life and death of people who have succeeded in living a very long life Because of this we have placed at the head of this book the chapter by Perls et al on Centenarians and the Genetics of Longevity Perls and his coauthors convincingly argue that while the average life expectancy might be mostly determined by environmental factors because the average person has an average genotype extremely long life spans are genetically determined Of course studying humans to uncover the genetics of aging is not ideal not so much because one cannot easily perform experiments as because they live such a long time This is why most of this book describes the current state of research with model organisms such as yeast worms flies and mice Jaswinski focuses on yeast and how metabolic activity and stress resistance affect the longevity of *Saccharomyces cerevisiae* In the process he discusses the concept of aging as applied to a unicellular organism such as yeast and the importance of metabolism and stress resistance for aging in all organisms

Evolution of NK-mediated target recognition under the pressure of physiologic or pathologic stimuli Massimo Vitale, Simona Sivori, Miguel López-Botet, Daniel Olive, 2015-03-23 Since their discovery NK cells have come out as potential tools to fight cancer and viruses This finding early urged different groups to study the mechanisms governing NK cell function The identification of the MHC I specific inhibitory receptors i e

KIRs NKG2A and certain Ly49 molecules allowed defining rather rapidly how NK cells could avoid self aggression and how they could be directed towards targets that were forced by viral infection or tumor transformation to down regulate MHC I expression In a second time also the repertoire of surface activating receptors addressing NK cytotoxicity towards tumors and pathogens was mostly defined In spite of the first findings however most recent studies may suggest that NK cells and their receptors might not have been evolved to kill tumor targets and perhaps they might have been only partially influenced in their evolution by the need of recognizing viruses Indeed certain NK receptors known to activate NK cell cytotoxicity NKp30 DNAM 1 NKp80 can also participate at regulatory interactions occurring between NK and myeloid cells In addition a peculiar NK cell subset which intensively populate decidua during the first trimester of pregnancy through the engagement of specific receptors and the interaction with decidual DC produce chemokines and pro angiogenic cytokines and induce Tregs Thus in this context NK cells favor decidua vascularization and development of the semiallogeneic foetus in a tolerant environment Viruses have nevertheless played an important role in shaping the NK cell receptor repertoire Several studies have unveiled clues of the evolutionary struggle between these pathogens and NK cells Different NK receptors including NKp46 NKp30 NKp44 NKG2D NKG2C Ly49 and certain KIRs have been demonstrated to recognize virus encoded or virus induced ligands The expression of TLR specifically recognizing microbial products together with the unexpected role of KIR3DL2 in shuttling these products to TLR containing endosomes have also been documented in NK cells On the other side different viral immune evasion molecules have been shown to interfere with the expression of ligands for T or NK cell activating receptors In addition viral infections can occur in the reproductive stage of life cycle and may represent a serious threat for the species propagation Thus the control of viruses together with the maintenance of foetus during pregnancy should represent major evolutionary forces in shaping NK receptors Along this line the NK mediated control of tumors should not be under the same evolutionary pressure as tumors mostly appear later in the life cycle and the recognition of tumor encoded ligands may be less efficient as the NK cell receptors might have not been selected for such aim This may be the reason why although displaying strong antitumor activity in vitro NK cells could hardly contain tumor burden in vivo In addition the pathogen driven evolution of NK cell function may also favor the role of NK cells in the insurgence of immune mediated diseases This research topic will collect contributions that may clarify the relationships between the evolution of the NK receptors and their role in an efficient recognition of viruses and tumor cells or in immune mediated diseases

Textbook Osteopathic Medicine Johannes Mayer, Clive Standen, 2018-01-22 For the first time a 60 person team of internationally renowned editors and authors presents a textbook of osteopathic medicine that is oriented towards clinical symptoms. Introductory chapters on history, philosophy and the spread of osteopathy are followed by a presentation of its scientific basis that clearly demonstrates how firmly osteopathy is rooted in science. Further chapters cover osteopathic research, diagnosis and principles of treatment. Two parts on therapeutic strategies in osteopathic practice form the core of this book. The first is divided into regions of the body, the second into clinical specialties that offer opportunities for osteopathic treatment. In both clinical parts osteopathic therapy is presented in the entirety in which it is actually practiced without the common but artificial separation of parietal, visceral and craniosacral treatment. First the clinical symptom is explained from a medical perspective, then the osteopathic perspective and treatment is presented. Thus the title is not only suitable for conveying a profound understanding of osteopaths in training, be they doctors or non-medical practitioners, but also as a clinical reference of osteopathic medicine for everyday treatment.

Fungal Genomics ,2003-08-28 The purpose of this volume is to highlight wide ranging applications of genomics in the area of applied mycology and biotechnology. The volume covers a brief overview on fungal genomics, meiotic recombination in fungi, molecular genetics of circadian rhythms, genome sequencing, transposable elements, mitochondrial genomes, ribosome biogenesis, pathogenicity, genes, genetic improvement of yeasts, microarrays, techniques and applications, fungal germplasm and data bases. Although it is difficult to develop a comprehensive volume on fungal genomics because of the range and complexity of the emerging knowledge, an attempt has been made to bring together pertinent information that will serve the needs of the reader, provide a quick reference to material that might otherwise be difficult to locate and furnish a starting point for further study.

The book discusses the basic and advanced developments in recent PFALs and future smart PFALs that emerged in 2016. There is an emerging interest around the globe in smart PFAL. 3 lack of understanding of the technical and engineering aspects of PFAL among horticulturists, 4 lack of knowledge of the technical challenges and opportunities in future PFAL businesses among business professionals, policy makers and investors and 5 lack of a suitable textbook on the recent advances in PFAL technologies and business for graduate students and young researchers. This book covers all the aspects of successful smart PFAL R D and business.
