Banzet,J.F. Holland,D. Khayat,M. Weil,2013-12-14 This book gathers the educational lectures and the texts of the main presentations given at the 4th International Congress on Anticancer Chemotherapy which took place in February 1993 in Paris and was attended by 5 000 oncologists from all continents physicians students and nurses This book aspires to give update of the most scientific and clinical aspects of modern oncology It aims also at showing the prospects that are opened by the rapid progress of cancer biology The editors are grateful to the authors whose scholarship defines the quality of the book Educational lectures The pathogenesis of human cancer metastasis I Fidler Cancer is a collection of malignancies with each cancer of each organ consisting of numerous subsets This biologic and clinical heterogeneity is probably due to the different etiologies origins and selection pressures Despite this heterogeneity all malignant neoplasms have a uniform characteristic the ability to invade host tissues and produce metastases Clinical observations of cancer patients and studies with experimental rodent tumors have revealed that certain tumors produce metastasis to specific organs independent of vascular anatomy rate of blood flow and number of tumor cells delivered to each organ The distribution and fate of hematogeneously disseminated radiolabelled tumor cells in experimental rodent systems amply demonstrate that tumor cells reach the microvasculature of many organs      *Henry's Clinical Diagnosis and Management by Laboratory Methods: First South Asia Edition\_E-book* Richard A.
