diverse that it has been difficult to encompass it in a single book. *Science & Technology in China: A Roadmap to 2050*, 2009-09-30 China's modernization is viewed as a transformative revolution in the human history of modernization. As such, the Chinese Academy of Sciences (CAS) decided to give higher priority to the research on the science and technology (S/T) roadmap for priority areas in China's modernization process. What is the purpose? And why is it? Is it a must? I think those are substantial and significant questions to start things forward. Significance of the Research on China's S/T Roadmap to 2050. We are aware that the National Mid and Long term S/T Plan to 2020 has already been formed after two years' hard work by a panel of over 2000 experts and scholars brought together from all over China, chaired by Premier Wen Jiabao. This clearly shows that China has already had its S/T blueprint to 2020. Then why did CAS conduct this research on China's S/T roadmap to 2050? In the summer of 2007, when CAS was working out its future strategic priorities for S/T development, it realized that some issues such as energy must be addressed with a long term view. As a matter of fact, some strategic researches have been conducted over the last 15 years on energy, but mainly on how to best use of coal, how to best exploit both domestic and international oil and gas resources, and how to develop nuclear energy in a discreet way. Renewable energy was of course included but only as a supplementary energy. *Selected Water Resources Abstracts*, 1991-03
