Learning Techniques for the Internet of Things Praveen Kumar Donta, Abhishek Hazra, Lauri Lovén, 2024-02-19 The book is structured into thirteen chapters each comes with its own dedicated contributions and future research directions Chapter 1 introduces IoT and the use of Edge computing particularly cloud computing and mobile edge computing This chapter also mentions the use of edge computing in various real time applications such as healthcare manufacturing agriculture and transportation Chapter 2 motivates mathematical modeling for federated learning systems with respect to IoT and its applications Further Chapter 3 extends the discussion of federated learning for IoT which has emerged as a privacy preserving distributed machine learning approach Chapter 4 provides various machine learning techniques in Industrial IoT to deliver rapid and accurate data analysis essential for enhancing production quality sustainability and safety Chapter discusses the potential role of data driven technologies such as Artificial Intelligence Machine Learning and Deep Learning focuses on their integration with IoT communication technologies Chapter 6 presents the requirements and challenges to realize IoT deployments in smart cities including sensing infrastructure Artificial Intelligence computing platforms and enabling communications technologies such as 5G networks To highlight these challenges in practice the chapter also presents a real world case study of a city scale deployment of IoT air quality monitoring within Helsinki city Chapter 7 uses digital twins within smart cities to enhance economic progress and facilitate prompt decision making regarding situational awareness Chapter 8 provides insights into using Multi Objective reinforcement learning in future IoT networks especially for an efficient decision making system Chapter 9 offers a comprehensive review of intelligent inference approaches with a specific emphasis on reducing inference time and minimizing transmitted bandwidth between IoT devices and the cloud Chapter 10 summarizes the applications of deep learning models in various IoT fields This chapter also presents an in depth study of these techniques to examine new horizons of applications of deep learning models in different areas of IoT Chapter 11 explores the integration of Quantum Key Distribution QKD into IoT systems It delves into the potential benefits challenges and practical considerations of incorporating QKD into IoT networks In chapter 12 a comprehensive overview regarding the current state of quantum IoT in the context of smart healthcare is presented along with its applications benefits challenges and prospects for the future Chapter 13 proposes a blockchain based architecture for securing and managing IoT data in intelligent transport systems offering advantages like immutability decentralization and enhanced security

Optinformatics in Evolutionary Learning and Optimization Liang Feng, Yaqing Hou, Zexuan Zhu, 2021-03-29 This book provides readers the recent algorithmic advances towards realizing the notion of optinformatics in evolutionary learning and optimization The book also provides readers a variety of practical applications including inter domain learning in vehicle route planning data driven

techniques for feature engineering in automated machine learning as well as evolutionary transfer reinforcement learning Through reading this book the readers will understand the concept of optinformatics recent research progresses in this direction as well as particular algorithm designs and application of optinformatics Evolutionary algorithms EAs are adaptive search approaches that take inspiration from the principles of natural selection and genetics Due to their efficacy of global search and ease of usage EAs have been widely deployed to address complex optimization problems occurring in a plethora of real world domains including image processing automation of machine learning neural architecture search urban logistics planning etc Despite the success enjoyed by EAs it is worth noting that most existing EA optimizers conduct the evolutionary search process from scratch ignoring the data that may have been accumulated from different problems solved in the past However today it is well established that real world problems seldom exist in isolation such that harnessing the available data from related problems could yield useful information for more efficient problem solving Therefore in recent years there is an increasing research trend in conducting knowledge learning and data processing along the course of an optimization process with the goal of achieving accelerated search in conjunction with better solution quality To this end the term optinformatics has been coined in the literature as the incorporation of information processing and data mining i e informatics techniques into the optimization process The primary market of this book is researchers from both academia and industry who are working on computational intelligence methods and their applications This book is also written to be used as a textbook for a postgraduate course in computational intelligence emphasizing methodologies at the intersection of optimization and machine learning

Wonder-Full Education Kieran Egan,Annabella I. Cant,Gillian Judson,2013-07-24 For many children much of the time their experience in classrooms can be rather dull and yet the world the school is supposed to initiate children into is full of wonder This book offers a rich understanding of the nature and roles of wonder in general and provides multiple suggestions for to how to revive wonder in adults teachers and curriculum makers and how to keep it alive in children Its aim is to show that adequate education needs to take seriously the task of evoking wonder about the content of the curriculum and to show how this can routinely be done in everyday classrooms The authors do not wax flowery they present strong arguments based on either research or precisely described experience and demonstrate how this argument can be seen to work itself out in daily practice The emphasis is not on ways of evoking wonder that might require virtuoso teaching but rather on how wonder can be evoked about the everyday features of the math or science or social studies curriculum in regular classrooms
