

GENERAL

Purge Solenoid (CA Models Only)

The purge solenoid allows vapors to escape back into the throttle body. The purge solenoid is timed to the throttle position but is disabled at startup, low engine temperature, low engine speed or low vehicle speed. The power for the purge solenoid comes from the system relay. The system relay also provides power for the injectors, fuel pump and the ignition coil. The ECM provides the path to ground to trigger the purge solenoid.

NOTE

- System fuse and system relay failures or wiring harness problems will cause 12 volt power to be lost to both injectors, ignition coils, fuel pump and purge solenoid.
- See Figure 8-127. A P0444 DTC can be set on non-California models if resistive plug is removed from connector [95B] or plug is faulty.
