Technology Handbook (with Process & Formulations) 2nd Revised Edition NIIR Board of Consultants and Engineers, 2016-10-01

The use of paints, varnishes and enamels for decoration is nearly as old as human culture itself. These are widely used in homes as well as in industry because painted surfaces are attractive and easy to keep clean. Paint is generally made up of a pigment. It is a chemical material which alters the color of reflected or transmitted light due to wavelength selective absorption. Varnish is a transparent hard protective finish or film primarily used in wood finishing but also for other materials. Varnish is traditionally a combination of a drying oil, a resin and a thinner or solvent. The technology of paints, varnishes and enamels is changing rapidly and becoming more complex each day. The paint industry is an important segment of the chemical industry. Enamel paint is paint that air dries to a hard, usually glossy finish used for coating surfaces that are outdoors or otherwise subject to wear or variations in temperature. The Indian paint industry has seen a gradual shift in the preferences of people from the traditional whitewash to higher quality paints like emulsions and enamel paints with improvement in lifestyle. India is the second largest consumer of paint in Asia. Over the past few years, the Indian paint market has substantially grown and caught the attention of many major players. The market for paints in India is expected to grow at 15% to 20% GDP growth rate in the coming years. In terms of volumes, pigments demand is expected to reach 4.4 million tonnes. Due to increased Government funding for infrastructure, demand for paints both in industrial and decorative segments is set to rise, thereby rendering the Indian paint industry to be poised for further growth. This handbook is designed for use by everyone engaged in the paints, pigments, varnishes and enamels industry. It provides all the information of the various formulae and processes of paints, pigments, varnishes and enamels. The major content of the book are: paint testing, color in paint, maintenance, paints, emulsion, paints, exterior or interior, paints, exterior or interior, multicolor, paints, exterior, swimming pool, paints and enamels, interior, ceiling, paints, metal, paints, marine, paints, enamel, paints, interior, fire retardant, paints, interior, gloss, paints, paint formulation, manufacture of natural copal, varnishes, floor, paints and enamels, varnishes, lacquers and floor finishes, white pigments, colored pigments, pigment dispersion, etc. The book contains addresses of plant machinery suppliers with their photographs. It will be a standard reference book for professionals, entrepreneurs, those studying and researching in this important area and others interested in the field of paints, pigments, varnishes and enamels technology.

Epoxy Resins Technology Handbook (Manufacturing Process, Synthesis, Epoxy Resin Adhesives and Epoxy Coatings) Dr. H. Panda, 2016-07-08 Epoxy is a term used to denote both the basic components and the cured end products of epoxy resins as well as a colloquial name for the epoxide functional group Epoxy resin are a class of thermoset materials used extensively in structural and specialty composite applications because they offer a unique combination of properties that are unattainable with other thermoset resins Epoxies are monomers or prepolymers that further reacts with curing agents to yield high performance thermosetting plastics They

have gained wide acceptance in protecting coatings electrical and structural applications because of their exceptional combination of properties such as toughness adhesion chemical resistance and superior electrical properties Epoxy resins are characterized by the presence of a three membered cycle ether group commonly referred to as an epoxy group 1 2 epoxide or oxirane The most widely used epoxy resins are diglycidyl ethers of bisphenol A derived from bisphenol A and epichlorohydrin The market of epoxy resins are growing day by day Today the total business of this product is more than 100 crores Epoxy resins are used for about 75% of wind blades currently produced worldwide while polyester resins account for the remaining 25% A standard 1.5 MW megawatt wind turbine has approximately 10 tonnes of epoxy in its blades

Traditionally the markets for epoxy resins have been driven by demand generated primarily in areas of adhesives building and civil construction electrical insulation printed circuit boards and protective coatings for consumer durables amongst others The major contents of the book are synthesis and characteristics of epoxy resin manufacture of epoxy resins epoxide curing reactions the dynamic mechanical properties of epoxy resins physical and chemical properties of epoxy resins epoxy resin adhesives epoxy resin coatings epoxy coating give into water electrical and electronic applications analysis of epoxides and epoxy resins and the toxicology of epoxy resins It will be a standard reference book for professionals and entrepreneurs Those who are interested in this field can find the complete information from manufacture to final uses of epoxy resin This presentation will be very helpful to new entrepreneurs technocrats research scholars libraries and existing units
