

In attempts to illuminate the paradoxical human growth within the fields of Modern Technology, this study presents some implications of modern development innovations and marvellous technological achievements, which, though built as ideal elements for human progress, still, much misery and suffering is caused by these new development models.

The work stipulates on the countless communication possibilities of the cyberspace that has made it possible for instantaneous interactive connections between persons, ideas and structures where ever and whenever possible. However, it is very shocking that, through these light and speedy no barrier's separating force between the various involved elements, these act, at the same time, acting as a major channel very strong expectations and discriminatory tendencies towards marginalized into wide spread violent animosity and conflicts.

In such, in order to highlight more the problematic surfaces, the document further identifies the basis and concept of the cyberspace and the primary or initiating or building on some social deviance aspects. Some of these aspects have the potency of modifying psychological behavioural patterns of individuals, institutions and roles, and therefore should be considered as, modifying deviating elements from an individual perspective that evolves within an international order.

Notwithstanding the mentioned detrimental effects of the cyberspace on global peace, the document also highlights the probable counter-conflict/peace growth measures necessary for improved human safety.

## Author

Dr. Kelly Ngyah is a CEO of Kelly Ngyah, International Peace and Development Foundation (KIND), registered in the United States of America. He is the founder and former Director and Chief of Humanitarian Relief (HAR) Center, formerly a UN Aggression Center for Africa and International Security, which was located and operational since year 2000. **Robert H. Latiff**

## **Modern Technology And Conflicts Kelly Ngyah:**

**Future Peace** Robert H. Latiff, 2022-03-01 *Future Peace* urges extreme caution in the adoption of new weapons technology and is an impassioned plea for peace from an individual who spent decades preparing for war. Today's militaries are increasingly reliant on highly networked autonomous systems, artificial intelligence, and advanced weapons that were previously the domain of science fiction writers. In a world where these complex technologies clash with escalating international tensions, what can we do to decrease the chances of war? In *Future Peace*, the eagerly awaited sequel to *Future War*, Robert H. Latiff questions our overreliance on technology and examines the pressure cooker scenario created by the growing animosity between the United States and its adversaries, our globally deployed and thinly stretched military, the capacity for advanced technology to catalyze violence, and the American public's lack of familiarity with these topics. *Future Peace* describes the many provocations to violence and how technologies are abetting those urges, and it explores what can be done to mitigate not only dangerous human behaviors but also dangerous technical behaviors. Latiff concludes that peace is possible but will require intense cooperative efforts on the part of technologists, military leaders, diplomats, politicians, and citizens. *Future Peace* amplifies some well-known ideas about how to address the issues and provides far, mid, and short-term recommendations for actions that are necessary to reverse the apparent headlong rush into conflict. This compelling and timely book will captivate general readers, students, and scholars of global affairs, international security, arms control, and military ethics.

**Future Conflict and New Technology** R. V. Jones, 1981
