Molecular And Cellular Aspects Of The Serpinopathies And Disorders In Serpin Activity:

Molecular and Cellular Aspects of the Serpinopathies and Disorders in Serpin Activity Gary A. Silverman, David A. Lomas, 2007 Serpins constitute a superfamily of proteins that possess a unique tertiary structure and mechanism of proteinase inhibition In humans serpins constitute 10% of the plasma proteins and are best known as critical regulators of both the thrombotic and fibrinolytic systems Serpins also participate in the regulation of the complement cascade angiogenesis tumor metastasis apoptosis and innate immunity Considering the importance of these molecules in regulating proteolytic cascades it is not surprising to find that loss and gain of function mutations result in significant human diseases Massive thrombosis or bleeding hereditary angioedema Alzheimer s disease diabetic angiopathy and tumor invasion are some of the human diseases associated with serpins In addition mutations that alter serpin conformations the serpinopathies lead to lung disease cirrhosis and a form of familial dementia The goal of this text is to present the current knowledge on the molecular and cellular basis of serpins and their diseases

Extracellular Targeting of Cell Signaling in Cancer James W. Janetka, Roseann M. Benson, 2018-05-10 International experts present innovative therapeutic strategies to treat cancer patients and prevent disease progression Extracellular Targeting of Cell Signaling in Cancer highlights innovative therapeutic strategies to treat cancer metastasis and prevent tumor progression Currently there are no drugs available to treat or prevent metastatic cancer other than non selective toxic chemotherapy With contributions from an international panel of experts in the field the book integrates diverse aspects of biochemistry molecular biology protein engineering proteomics cell biology pharmacology biophysics structural biology medicinal chemistry and drug development A large class of proteins called kinases are enzymes required by cancer cells to grow proliferate and survive apoptosis death by the immune system Two important kinases are MET and RON which are receptor tyrosine kinases RTKs that initiate cell signaling pathways outside the cell surface in response to extracellular ligands growth factors Both kinases are oncogenes which are required by cancer cells to migrate away from the primary tumor invade surrounding tissue and metastasize MET and RON reside on both cancer cells and the support cells surrounding the tumor called the microenvironment MET and RON are activated by their particular ligands the growth factors HGF and MSP respectively Blocking MET and RON kinase activation and downstream signaling is a promising therapeutic strategy for preventing tumor progression and metastasis Written for cancer physicians and biologists as well as drug discovery and development teams in both industry and academia this is the first book of its kind which explores novel approaches to inhibit MET and RON kinases other than traditional small molecule kinase inhibitors These new strategies target key tumorigenic processes on the outside of the cell such as growth factor activation by proteases These unique strategies have promising potential as an improved alternative to kinase inhibitors chemotherapy or radiation treatment

The Serpin Family Margarethe Geiger, Felix Wahlmüller, Margareta Furtmüller, 2015-11-13 The book provides an comprehensive overview on biology genetics and cellular functions of serpins

serine protease inhibitors in health and disease With over 1000 members serpins are the most diverse family of protease inhibitors Latest groundbreaking research findings are presented and broaden the understanding on inhibitory and non inhibitory serpins not only in mammalian organisms but also in insects worms plants and viruses

Proteases and Their Receptors in Inflammation Nathalie Vergnolle, Michel Chignard, 2011-08-03 Proteases are everywhere from prokaryotes to eukaryotes from virus to bacteria and in all human tissues playing a role in many biological functions Among these functions the inflammatory reaction is of particular interest In inflamed tissues proteases can have a microbial and or host origin and are involved not only in tissue remodeling but also in specific signaling to resident or inflammatory cells thereby contributing to the innate immune response This volume presents all advances in our knowledge of the role proteases and their inhibitors play in various diseases associated with inflammatory response Mechanisms involved in protease signaling to cells are presented and the different types of proteases that are present at inflammatory sites and their effects on the course of inflammation are discussed Finally the evidence for considering proteases and their receptors as potential molecular targets for therapeutic interventions in the treatment of inflammatory diseases is discussed in the context of specific organ inflammatory pathologies the lung gastrointestinal tract skin joints etc

Biology of Serpins James Whisstock, Phillip Bird, 2011-06-11 Serpins are a group of proteins with similar structures that were first identified as a set of proteins able to inhibit proteases The acronym serpin was originally coined because many serpins inhibit chymotrypsin like serine proteases This volume of Methods in Enzymology is split into 2 parts and comprehensively covers the subject

Serpin Structure and Evolution, 2011-11-07 Serpins are a group of proteins with similar structures that were first identified as a set of proteins able to inhibit proteases This volume in the Methods in Enzymology series comprehensively covers this topic With an international board of authors this volume covers subjects such as Crystallography of serpins and serpin complexes Serpins as hormone transporters and Production of serpins using cell free systems This volume in the Methods in Enzymology series comprehensively covers the topic of serpins With an international board of authors this volume covers subjects such as Crystallography of serpins and serpin complexes Serpins as hormone transporters and Production of serpins using cell free systems
