Rybicki,Kazuhito Fujiyama,2017-04-27 Plant gene transfer achieved in the early 80s paved the way for

the exploitation of the potential of gene engineering to add novel agronomic traits and or to design plants as factories for high added value molecules For this latter area of research the term Molecular Farming was coined in reference to agricultural applications in that major crops like maize and tobacco were originally used basically for pharma applications The concept of the green biofactory implies different advantages over the typical cell factories based on animal cell or microbial cultures already when considering the investment and managing costs of fermenters Although yield stability and quality of the molecules may vary among different heterologous systems and plants are competitive on a case to case basis still the plant factory attracts scientists and technologists for the challenging features of low production cost product safety and easy scale up Once engineered a plant is among the cheapest and easiest eukaryotic system to be bred with simple know how using nutrients water and light Molecules that are currently being produced in plants vary from industrial and pharmaceutical proteins including medical diagnostics proteins and vaccine antigens to nutritional supplements such as vitamins carbohydrates and biopolymers Convergence among disciplines as distant as plant physiology and pharmacology and more recently as omic sciences bioinformatics and nanotechnology increases the options of research on the plant cell factory Farming for Pharming biologics and small molecule medicines is a challenging area of plant biotechnology that may break the limits of current standard production technologies The recent success on Ebola fighting with plant made antibodies put a spotlight on the enormous potential of next generation herbal medicines made especially in the name of the guiding principle of reduction of costs hence reduction of disparities of health rights and as a tool to guarantee adequate health protection in developing countries
