Molten Salts and Ionic Liquids Marcelle Gaune-Escard, Kenneth R. Seddon, 2012-07-02 For many years the related fields of molten salts and ionic liquids have drifted apart to their mutual detriment Both molten salts and ionic liquids are liquid salts containing only ions all that is different is the temperature Both fields involve the study of Coulombic fluids for academic and industrial purposes both employ the same principles both require skilled practitioners both speak the same language all then that is truly different is their semantics and how superficial is that The editors of this book recognising that there was so much knowledge both empirical and theoretical which can be passed from the molten salt community to the ionic liquid community and vice versa organised a landmark meeting in Tunisia designed to bridge the gap and heal the rift Leaders from both communities met for a week for a mutual exchange with a high tutorial content intermixed with cutting edge findings This volume is a condensate of the principal offerings of that week and emphasises the success which was achieved Indeed four future biannual meetings under the title of EUCHEM Conferences on Molten Salts and Ionic Liquids have now been planned as a direct result of this meeting of minds Topics discussed in this volume include structure dynamics electrochemistry interfacial and thermodynamic properties spectroscopy synthesis and theoretical studies Experimental and theoretical methods for investigating these data are elaborated as are techniques for data collection and analysis This book represents the first serious discussion on the transfer of these methods and techniques between the differing temperature regimes and is a major contribution to the future of both fields

future of both fields Green Solvents I Ali Mohammad, Inamuddin Dr., 2012-03-13 The conventional solvents used in chemical pharmaceutical biomedical and separation processes represent a great challenge to green chemistry because of their toxicity and flammability Since the beginning of the 12 Principles of Green Chemistry in 1998 a general effort has been made to replace conventional solvents with environmentally benign substitutes Water has been the most popular choice so far followed by ionic liquids surfactant supercritical fluids fluorinated solvents liquid polymers bio solvents and switchable solvent systems *Green Solvents Volume I and II* provides a throughout overview of the different types of solvents and discusses their extensive applications in fields such as extraction organic synthesis biocatalytic processes production of fine chemicals removal of hydrogen sulphide biochemical transformations composite material energy storage devices and polymers These volumes are written by leading international experts and cover all possible aspects of green solvents properties and applications available in today's literature *Green Solvents Volume I and II* is an invaluable guide to scientists R D industrial specialists researchers upper level undergraduates and graduate students Ph D scholars college and university professors working in the field of chemistry and biochemistry *Ionic Liquid Properties* Yizhak Marcus, 2016-04-22 This volume deals with substances in the liquid state that range from high melting salts such as calcium fluoride through slags such as silicates down to lower melting salts such as lithium nitrate molten hydrated salts such as magnesium chloride hexahydrate to room temperature ionic liquids such as 1,3-dimethylimidazolium tetraphenylborate It provides the reader with annotated critically examined and compiled data for such materials The data includes a variety of thermochemical structural and transport properties The book includes correlations of measured properties these correlations should enable the reader to estimate on a sound basis properties for ionic liquids that have not yet been measured *Ionic Liquids* Scott Handy, 2011-10-10 Room temperature ionic liquids RTILs are an interesting and valuable family of compounds Although they are all salts their components can vary considerably including imidazolium pyridinium ammonium phosphonium thiazolium and triazolium cations In general these cations have been combined with weakly coordinating anions Common examples include tetrafluoroborate hexafluorophosphate triflate triflimide and dicyanimide The list of possible anionic components continues to grow at a rapid rate Besides exploring new anionic and cation components another active and important area of research is the determination and prediction of their physical properties particularly since their unusual and tunable properties are so often mentioned as being one of the key advantages of RTILs over conventional solvents Despite impressive progress much work remains before the true power of RTILs as designer solvents i.e. predictable selection of a particular RTIL for any given application can be effectively harnessed **Electrochemistry in Ionic Liquids** Angel A.
