

Steering Gear Lubrication

The steering gear should be lubricated with Fleet Seal Lubricant at 15,000 or less miles and, if possible, when necessary. When lubricating the steering gear, care should be taken to avoid over-lubricating the steering gear joints, as this may fill the steering column packed to overflowing, causing damage to shafting and the bearings.

In extremely cold weather it may be necessary to dilute the steering gear oil with a small percentage of No. 10-M engine oil to avoid stiff steering.

Universal Joint Lubrication

The universal joints are lubricated when they are assembled at the factory and, due to the design and protection given them, will not require additional lubrication for 15,000 miles of normal driving. A car operated over gravel or unpaved roads should be inspected regularly for damage to the universal joint boots caused by flying stones, etc. If damaged, the boots should be replaced before loss of or contamination of lubricant occurs which will result in damage to the working parts of the joints.

This inspection and lubrication should be performed by your Dodge dealer.

Front Wheel Suspension

The front wheels are independently sprung and each mounted on two taper roller bearings. It is important that correct wheel alignment be maintained, for misalignment which causes an apparent damage may upset the wheel alignment and cause steering difficulties or excessive tire wear. It is advisable to have the wheel alignment of your car checked periodically by your Dodge dealer.

Front wheel bearings may require adjustment after considerable mileage has been covered. This adjustment can be made by removing the hub cap and cotter pin in the upper end of the spindle, then turning the large nut at the end of the spindle. Using a wrench approximately eight inches long turn the nut up tight and then back it off until the wheel turns freely but without play in the bearings. Install new cotter pins in the proper size through the nut and spindle ends before replacing the hub caps. Wheel bearings should be lubricated in accordance with instructions given in the maintenance schedule.
