Harper,B. Lefebvre,I. G. Percival,T.

Servais,2023-06-07 The Ordovician was one of the longest of the geological periods characterized by major magmatic and tectonic activity an immense biodiversification swings in climate and sea levels and the first Phanerozoic mass extinction A

Global Synthesis of the Ordovician System is presented in two volumes in The Geological Society Special Publications This first volume SP532 charts the history of the Ordovician System and explores significant advances in our understanding of its biostratigraphy including more precise calibration of its timescale with tephra chronology and regional alignments using astrochronology and cyclostratigraphy Changes in the world's oceans their shifting currents and sea levels the biogeography of their biotas and the ambient climate are described and discussed against a background of changing palaeogeography This first volume also includes syntheses of the Ordovician geology for most European countries including historical key areas such as Great Britain Baltoscandia and Bohemia The second volume SP533 provides synthetic aspects of the Ordovician geology of most other parts of the world Understanding Late Devonian and Permian-Triassic Biotic and Climatic Events

Jeff Over, Jared Morrow, P. Wignall, 2005-12-02 The Late Devonian and Permian Triassic intervals are among the most dynamic episodes of Earth history marked by large secular changes in continental ecosystems dramatic fluctuations in ocean oxygenation major phases of biotic turnover volcanism bolide impact events and rapid fluctuations in stable isotope systems and sea level This volume highlights contributions from a broad range of geological sub disciplines currently striving to understand these critical intervals of geologically rapid global scale changes Provides updated current models for the mid Late Devonian and Permian Triassic mass extinction episodes Highlights several new analytical approaches for developing quantitative datasets Takes an integrated approach presenting datasets from a broad range of sub disciplines

Contributions to Modern and Ancient Tidal Sedimentology Bernadette Tessier, Jean-Yves Reynaud, 2016-03-03 Tidal deposits have been a specific research topic for about 40 years and whilst this has resulted in a proliferation of papers in scientific journals there have only been a few book length syntheses Over the years tidal sedimentology has been reinforced by fluid mechanics and numerical modelling but has remained rooted in facies and stratigraphic studies Recent developments in tidal sedimentology lean toward a more quantitative assessment of the imprint of tides in the facies record of intertidal and shallow subtidal areas They highlight the increasing relevance of tidal deposits studies from high resolution subsurface reservoir geology to climate change and sea level rise This volume gathers 17 contributions to the Tidalites 2012 congress held in Caen France It reflects current advances in the sedimentology and stratigraphy of tidal deposits in both ancient and modern environments It shows the current diversity of this field of research through a wide spectrum of methods including remote sensing in situ hydrodynamical measurements and ichnology in addition to classic field studies and petrography

*The Great Ordovician Biodiversification Event* B. D. Webby, 2004 Two of the greatest evolutionary events in the history of life on Earth occurred during Early Paleozoic time The first was the Cambrian explosion of skeletonized marine animals about 540 million years ago The second was the Great Ordovician Biodiversification Event which is the focus of this book This is the first book devoted specifically to establishing the global patterns of differentiation of Ordovician biotas through time and space It provides extensive genus and species level diversity data for the many Ordovician fossil groups and presents an

evaluation of how each group diversified with assessments of patterns of change and rates of origination and extinction

**Carbonate Systems During the Oligocene-Miocene Climatic Transition** Maria Mutti, Werner E. Piller, Christian Betzler, 2011-09-14 The Oligocene and Miocene Epochs comprise the most important phases in the Cenozoic global cooling that led from a greenhouse to an icehouse Earth Recent major advances in the understanding and time resolution of climate events taking place at this time as well as the proliferation of studies on Oligocene and Miocene shallow water neritic carbonate systems invite us to re evaluate the significance of these carbonate systems in the context of changes in climate and Earth surface processes Carbonate systems because of a wide dependence on the ecological requirements of organisms producing the sediment are sensitive recorders of changes in environmental conditions on the Earth surface The papers included in this Special Publication address the dynamic evolution of carbonate systems deposited during the Oligocene and Miocene in the context on climatic and Earth surfaces processes focusing on climatic trends and controls over deposition temporal changes in carbonate producers and palaeoecology carbonate terminology facies processes and environmental parameters including water temperature and production depth profiles carbonate producers and their spatial and temporal variability and tectonic controls over architecture This book is part of the International Association of Sedimentologists IAS Special Publications The Special Publications from the IAS are a set of thematic volumes edited by specialists on subjects of central interest to sedimentologists Papers are reviewed and printed to the same high standards as those published in the journal *Sedimentology* and several of these volumes have become standard works of reference *Paleontological Data Analysis* Øyvind Hammer, David A. T. Harper, 2008-04-15 During the last 10 years numerical methods have begun to dominate paleontology These methods now reach far beyond the fields of morphological and phylogenetic analyses to embrace biostratigraphy paleobiogeography and paleoecology *Paleontological Data Analysis* explains the key numerical techniques in paleontology and the methodologies employed in the software packages now available Following an introduction to numerical methodologies in paleontology and to univariate and multivariate techniques including inferential testing there follow chapters on morphometrics phylogenetic analysis paleobiogeography and paleoecology time series analysis and quantitative biostratigraphy Each chapter describes a range of techniques in detail with worked examples illustrations and appropriate case histories Describes the purpose type of data required functionality and implementation of each technique together with notes of caution where appropriate The book and the accompanying PAST software package see [www.blackwellpublishing.com/hammer](http://www.blackwellpublishing.com/hammer) are important investigative tools in a rapidly developing field characterized by many exciting new discoveries and innovative techniques An invaluable tool for all students and researchers involved in quantitative paleontology **Mass Extinction** Ashraf M.T. Elewa, 2007-12-03 The present book combines three main aspects five major mass extinctions contributions on some other minor extinctions and more importantly contributions on the current mass extinction All three aspects are introduced through interesting studies of mass extinctions in diverse organisms ranging from small invertebrates

to mammals and take account of the most accepted subjects discussing mass extinctions in insects mammals fishes ostracods and molluscs **The Trace-Fossil Record of Major Evolutionary Events** M. Gabriela Mángano, Luis A.

Buatois, 2016-11-17 This volume addresses major evolutionary changes that took place during the Mesozoic and the Cenozoic. These include discussions on major evolutionary radiations and ecological innovations on land and at sea such as the Mesozoic marine revolution the Mesozoic radiation of vertebrates the Mesozoic lacustrine revolution the Cenozoic radiation of mammals the evolution of paleosol biotas and the evolution of hominins. The roles of mass extinctions at the end of the Triassic and at the end of the Cretaceous are assessed. This volume set provides innovative reviews of the major evolutionary events in the history of life from an ichnologic perspective. Because the long temporal range of trace fossils has been commonly emphasized biogenic structures have been traditionally overlooked in macroevolution. However comparisons of ichnofaunas through geologic time do reveal the changing ecology of organism substrate interactions. The use of trace fossils in evolutionary paleoecology represents a new trend that is opening a window for our understanding of major evolutionary radiations and mass extinctions. Trace fossils provide crucial evidence for the recognition of spatial and temporal patterns and processes associated with paleoecologic breakthroughs. *Environmental Health Perspectives*, 1993. Contains full text for issues from 1996 full text of selected articles for issues from v 2 1972.

**Environmental Literacy in Science and Society** Roland W. Scholz, Claudia R. Binder, 2011-07-21 In an era where humans affect virtually all of the earth's processes questions arise about whether we have sufficient knowledge of human environment interactions. How can we sustain the Earth's ecosystems to prevent collapses and what roles should practitioners and scientists play in this process? These are the issues central to the concept of environmental literacy. This unique book provides a comprehensive review and analysis of environmental literacy within the context of environmental science and sustainable development. Approaching the topic from multiple perspectives it explores the development of human understanding of the environment and human environment interactions in the fields of biology psychology sociology economics and industrial ecology. The discussion emphasises the importance of knowledge integration and transdisciplinary processes as key strategies for understanding complex human environment systems. HES. In addition the author defines the HES framework as a template for investigating sustainably coupled human environment systems in the 21st century. *Fossils at a Glance* Clare Milsom, Sue Rigby, 2013-04-16 Fossils provide a powerful tool for the study of the nearly 4 billion year history of life and its role in the evolution of Earth systems. They also provide important data for evolutionary studies and contribute to our understanding of the extinction of organisms and the origins of modern biodiversity. *Fossils At A Glance* is written for students taking an introductory level course in paleontology. Short chapters introduce the main topics in the modern study of fossils. The most important fossil groups are discussed from microfossils through invertebrates to vertebrates and plants followed by a brief narrative of life on Earth. Diagrams are central to the book and allow the reader to see most of the important data at a glance. Each topic covers two

pages and provides a self contained suite of information or a starting point for future study This second edition has been thoroughly revised and brought up to date It includes new line diagrams as well as photographs of selected fossils
