Micro and Nano Machining of Engineering Materials Kaushik Kumar, Divya Zindani, Nisha Kumari, J. Paulo Davim, 2018-09-26 This book covers the recent developments in the production of micro and nano size products which cater to the needs of the industry. The processes to produce the miniature sized products with unique characteristics are addressed. Moreover, their application in areas such as micro engines, micro heat exchangers, micro pumps, micro channels, printing heads, and medical implants are also highlighted. The book presents such microsystem based products as important contributors to a sustainable economy. The recent research in this book focuses on the development of new micro and nano manufacturing platforms while integrating the different technologies to manufacture the micro and nano components in a high throughput and cost effective manner. The chapters contain original theoretical and applied research in the areas of micro and nano manufacturing that are related to process innovation, accuracy and precision, throughput enhancement, material utilization, compact equipment development, environmental and life cycle analysis, and predictive modeling of manufacturing processes with feature sizes less than one hundred micrometers. *Nano and Micromachining* J. Paulo Davim, Mark J. Jackson, 2013-03-04 This book provides the fundamentals and recent advances in nano and micromachining for modern manufacturing engineering. It begins by providing an outline of nanomachining with emphasis being given to molecular dynamics, cutting and chip formation, before discussing various advances in field and machining processes including advances in diamond cutting tools, conventional processes, microturning, microdrilling, micromilling, etc., grinding and ultra precision processes and non conventional machining processes, laser micromachining, EDM micromachining, etc. The coverage concludes with an evaluation of subsurface damages in nano and micromachining and a presentation of applications in industry. As such, not only is this book useful to those studying engineering or machining at both an undergraduate and postgraduate level, but it also serves as a useful reference guide for academics and engineers involved in these areas and related industries. **Innovative Development in Micromanufacturing Processes** Pawan Kumar Rakesh, J. Paulo Davim, 2023-11-23 Innovative Development in Micromanufacturing Processes details cutting edge technologies in micromanufacturing processes, an industry which has undergone a technological transformation in the past decade. Enabling engineers to create high performance, low cost and long lasting products, this book is an essential companion to all those working in micro and nano engineering. As products continue to get smaller and smaller, the field of micromanufacturing has gained an international audience. This book looks at both approaches of micromanufacturing: top down and bottom up. The top down approach includes subtractive micromanufacturing processes such as microturning, micromilling, microdrilling, laser beam micromachining, and magnetic abrasive finishing. The bottom up approach involves additive manufacturing processes such as micro forming, micro deep drawing, microforging, microextrusion, and microwelding. Additionally, microjoining and microhybrid manufacturing processes are discussed in detail. The book also aids engineers and
