Soil Survey Field and Laboratory Methods Manual - Soil Survey Investigations Report No. 51 (Version 2) Issued 2014

U.S. Department of Agriculture, 2019-04-06 Field and laboratory data are critical to the understanding of the properties and genesis of a single pedon as well as to the understanding of fundamental soil relationships based on many observations of a large number of soils. Key to the advancement of this body of knowledge has been the cumulative effort of several generations of scientists in developing methods, designing and developing analytical databases and investigating soil relationships based on these data. Methods development results from a broad knowledge of soils encompassing topical areas of pedology, geomorphology, micromorphology, physics, chemistry, mineralogy, biology, and field and laboratory sample collection and preparation. The purpose of this manual, the Soil Survey Field and Laboratory Methods Manual, Soil Survey Investigations Report SSIR No. 51, is to 1) serve as a standard reference in the description of site and soils sampling strategies and assessment techniques and 2) provide

Prospects and Applications for Plant-Associated Microbes, A laboratory manual Anna Maria Pirttilä, Seppo Sorvari, 2014-12-15 Plant associated microbes are ubiquitous organisms living in a range of interactions with their host. Involving two organisms, research and applications of plant microbes are challenging and often require specific skills. This book guides the reader in the world of plant associated fungi, giving both theoretical and practical insight on the potential of this interaction in biotechnology. Detailed instructions and step by step protocols are described for isolation, identification, localization, and community analysis of fungi. Studies on their bioactivity, molecular plant fungal interactions, and development of fungi as tools for biotechnology.

Instrument and Automation Engineers' Handbook Bela G. New Perspectives on the Biology of Nectaries and Nectars Clay Carter, Robert W. Thornburg, Massimo Nepi, 2019-08-27 The number of currently known described and accepted plant species is ca. 374,000, of which approximately 295,000 (79%) are angiosperms. Almost 90% of this huge number of flowering plants is pollinated by animals, mostly insects, via nectar-mediated interactions. Notably, three-fourths of the leading global crop plants produce nectar and are animal-pollinated, which is estimated to account for one-third of human food resources. Nectar can also be produced on tissues outside of flowers by so-called extrafloral nectaries and commonly mediate interactions with body-guard ants and other pugnacious insects that defend the plant from herbivores.

Extrafloral nectar is present in almost 4 000 plant species a majority of them in the angiosperms This brief summary on the occurrence of nectar in the plant kingdom is just to highlight that nectar has a fundamental role in two basal functions that allow the maintenance of our ecosystems sexual plant reproduction and protection of plants from herbivory Despite playing essential ecological and evolutionary functions our current knowledge about nectar is largely incomplete however new research directions and perspectives on nectaries and nectars have arisen in recent years In the last two decades there were only a few moments in which nectar was the main character in international meetings or in published books In 2002 the first and only international meeting Nectar and nectary from biology to biotechnology dedicated exclusively to nectar and nectaries was held in Italy Montalcino Siena and in 2003 the proceedings were published in a special volume of Plant Systematics and Evolution 238 issue 1 4 In 2007 the book Nectar and Nectaries was published Springer with most of the contributions provided by authors that attended the meeting in Italy Another book dedicated to nectar was published in 2015 Nectar Production Chemical Composition and Benefits to Animals and Plants Nova Science Publishers covering aspects mainly related to nectar chemical composition and plant pollinator interactions Similarly symposia focused on nectar have been organized within the International Botanical Congress in 2011 and 2017 Considering that the last few years has yielded essential developments in the understanding of nectar biology we thought now is the moment to further stimulate research on this important topic This aim has been met through 18 papers published in our Research Topic New Perspectives on the Biology of Nectaries and Nectars with subjects spanning evolution and ecology to nectar chemistry and nectary structure

Metabolic Interactions Between Bacteria and Phytoplankton Xavier Mayali, Sonya Dyhrman, Chris Francis, 2018-06-06 The cycling of energy and elements in aquatic environments is controlled by the interaction of autotrophic and heterotrophic processes In surface waters of lakes rivers and oceans photosynthetic microalgae and cyanobacteria fix carbon dioxide into organic matter that is then metabolized by heterotrophic bacteria and perhaps archaea Nutrients are remineralized by heterotrophic processes and subsequently enable phototrophs to grow The organisms that comprise these two major ecological guilds are numerous in both numbers and in their genetic diversity leading to a vast

array of physiological and chemical responses to their environment and to each other Interactions between bacteria and phytoplankton range from obligate to facultative as well as from mutualistic to parasitic and can be mediated by cell to cell attachment or through the release of chemicals The contributions to this Research Topic investigate direct or indirect interactions between bacteria and phytoplankton using chemical physiological and or genetic approaches Topics include nutrient and vitamin acquisition algal pathogenesis microbial community structure during algal blooms or in algal aquaculture ponds cell cell interactions chemical exudation signaling molecules and nitrogen exchange These studies span true symbiosis where the interaction is evolutionarily derived as well as those of indirect interactions such as bacterial incorporation of phytoplankton produced organic matter and man made synthetic symbiosis synthetic mutualism
