**The Dialectic Relation Between Physics and Mathematics in the XIXth Century** Evelyne Barbin,Raffaele Pisano,2013-04-02 The aim of this book is to analyse historical problems related to the use of mathematics in physics as well as to the use of physics in mathematics and to investigate Mathematical Physics as precisely the new discipline which is concerned with this dialectical link itself So the main question is When and why did the tension between mathematics and physics explicitly practised at least since Galileo evolve into such a new scientific theory The authors explain the various ways in which this science allowed an advanced mathematical modelling in physics on the one hand and the invention of new mathematical ideas on the other hand Of course this problem is related to the links between institutions universities schools for engineers and industries and so it has social implications as well The link by which physical ideas had influenced the world of mathematics was not new in the 19th century but it came to a kind of maturity at that time Recently much historical research has been done into mathematics and physics and their relation in this period The purpose of the Symposium and this book is to gather and re evaluate the current thinking on this subject It brings together contributions from leading experts in the field and gives much needed insight in the subject of mathematical physics from a historical point of view

**The Sandemanian Story** Derek B. Murray,2024-04-12 The Glasites or Sandemanians were a branch of the church with their roots in Scotland but who spread much wider This study seeks to explore their distinctives both of theology and practice and to place them in a wider context The examination of a small sect serves to illuminate the wider story and this particular community nurtured within it several

eminent thinkers whose influence has been of deep importance not the least the scientific pioneer Michael Faraday In exploring both their growth and their decline the author seeks to convey something of the flavor of this part of the church and to consider what their legacy is *The Foundations of Information Systems* Andrew Basden,2017-10-24 Why does information technology disappoint or enslave us Why do so many information systems projects collapse How can we do better There are many technical social economic and other aspects to consider How do we ensure we take all these into account as we research ITC or employ them ICT affects our lives and world more profoundly than ever before How may we understand it This book employs philosophy to lay foundations for understanding the complexity of ICT in five areas The nature of information and computers and artificial intelligence The use of ICT at work and home for serious and less serious use The ICT features that annoy or delight us Societal issues such as surveillance e government ICT in developing countries climate change what technological progress is and what is the role of ICT as a whole and of the information systems field ICT development including computer programming knowledge engineering and project management The ideas in this book emerge from five decades of experience of the author with ICT across industry the professions and academic life Information systems researchers will enjoy this book because it offers them new ideas and fresh perspectives On the 500th anniversary of the European Reformation this book introduces and applies the Reformational Philosophy of mid 20th century Dutch thinker Herman Dooyeweerd to contemporary challenges of the 21st century Excitingly this accessible philosophy is grounded in everyday experience and yields a rich seedbed of ideas which researchers and practitioners can develop to their advantage

**Foundations and Practice of Research** Andrew Basden,2019-10-11 Many of the issues on which meaningful research is founded are seldom discussed for example the role of everyday experience diversity and coherence of meaning in the world the meaningfulness and wider mandate of research the very nature and validity of theoretical thought and the deep presuppositions of philosophy and how they undermine the success of research Such questions are material to the philosophies that guide research thinking in all fields and since they cannot be satisfactorily addressed in a piecemeal fashion this book employs the radically different philosophy of Herman Dooyeweerd to consider them together Parts I and II discuss these issues theoretically and philosophically while Part III discusses them practically specifically the adventures that researchers across the world have had using Dooyeweerd s philosophy *Foundations and Practice of Research* assembles a wide range of experiences of using Dooyeweerd s philosophy in research in the fields of mathematics the natural sciences the social sciences design sciences and the humanities Case studies demonstrate how Dooyeweerd s philosophy has been found

fruitful in most stages of research and the philosophical discussion backs this up This book challenges researchers to join the adventures including suggestions of potential research that could be carried out as well as questions still left unanswered
