*Intelligent Data Engineering and Automated Learning - IDEAL 2008* Colin Fyfe, Dongsup Kim, Soo-Young Lee, Hujun Yin, 2008-11-04 IDEAL 2008 was the ninth IDEAL conference to take place earlier editions were held in Hong Kong the UK Australia and Spain This was the first time though hopefully not the last time that it took place in Daejeon South Korea during November 2 5 2008 As the name suggests the conference attracts researchers who are involved in either data engineering or learning or increasingly both The former topic involves such aspects as data mining or intelligent knowledge discovery from databases information retrieval systems data warehousing speech image video processing and multimedia data analysis There has been a traditional strand of data engineering at IDEAL conferences which has been based on financial data management such as fraud detection portfolio analysis prediction and so on This has more recently been joined by a strand devoted to bioinformatics particularly neuroinformatics and gene expression analysis Learning is the other major topic for these conferences and this is addressed by researchers in artificial neural networks machine learning evolutionary algorithms artificial immune systems and algorithms probabilistic modelling fuzzy systems and agent modelling The core of all these algorithms is adaptation

**DNA Microarrays, Part B: Databases and Statistics**, 2006-08-28 Modern DNA microarray technologies have evolved over the past 25 years to the point where it is now possible to take many million measurements from a single experiment These two volumes Parts A B in the *Methods in Enzymology* series provide methods that will shepherd any molecular biologist through the process of planning performing

and publishing microarray results Part A starts with an overview of a number of microarray platforms both commercial and academically produced and includes wet bench protocols for performing traditional expression analysis and derivative techniques such as detection of transcription factor occupancy and chromatin status Wet bench protocols and troubleshooting techniques continue into Part B These techniques are well rooted in traditional molecular biology and while they require traditional care a researcher that can reproducibly generate beautiful Northern or Southern blots should have no difficulty generating beautiful array hybridizations Data management is a more recent problem for most biologists The bulk of Part B provides a range of techniques for data handling This includes critical issues from normalization within and between arrays to uploading your results to the public repositories for array data and how to integrate data from multiple sources There are chapters in Part B for both the debutant and the expert bioinformatician Provides an overview of platforms Includes experimental design and wet bench protocols Presents statistical and data analysis methods array databases data visualization and meta analysis
