Healthcare João Silva Sequeira,2020-02-17 The work is a collection of contributions resulting from R D efforts originated from scientific projects involving academia technological partners and end user institutions The aim is to provide a comprehensive overview of robotics technology applied to Healthcare and discuss the anticipation of upcoming challenges The intersection of Robotics and Medicine includes socially and economically relevant areas such as rehabilitation therapy and healthcare Innovative usages of current robotics technologies are being somewhat stranded by concerns related to social dynamics The examples covered in this volume show some of the potential societal benefits robotics can bring and how the robots are being integrated in social environments Despite the aforementioned concerns a fantastic range of possibilities is being opened The current trend in social robotics adds to technology challenges and requires R D to think about Robotics as an horizontal discipline intersecting social and exact sciences For example robots that can act as if they have credible personalities not necessarily similar to humans living in social scenarios eventually helping people Also robots can move inside the human body to retrieve information that otherwise is difficult to obtain The decision autonomy of these robots raises a broad range of subjects though the immediate advantages of its use are evident The book presents examples of robotics technologies tested in healthcare environments or realistically close to being deployed in the field and discusses the challenges involved Chapter 1 provides a comprehensive overview of Healthcare robotics and points to realistically expectable developments in the near future Chapter 2 describes the challenges deploying a social robot in the Pediatrics ward of an Oncological hospital for simple edutainment activities Chapter 3 focuses on Human Robot Interaction techniques and their role in social robotics Chapter 4 focus on R D efforts behind an endoscopic capsule robot Chapter 5 addresses

experiments in rehabilitation with orthotics and walker robots These examples have deep social and economic relations with the Healthcare field and at the same time are representative of the R D efforts the robotics community is developing
