Mismanaged Trade Strategic Policy And The Semiconductor Industry:

Mismanaged Trade? Kenneth Flamm, 2010-12-01 The semiconductor industry is at the forefront of current tensions over international trade and investment in high technology industries This book traces the struggle between U S and Japanese semiconductor producers from its origins in the 1950s to the novel experiment with managed trade embodied in the U S Japan Semiconductor Trade Arrangements of 1986 and the current debate over continuation of elements of that agreement Flamm provides a thorough analysis of this experiment and its consequences for U S semiconductor producers and users and presents extensive discussion of patterns of competition within the semiconductor industry Using a wealth of new data he argues that a fundamentally new trade regime for high technology industries is needed to escape from the present impasse He lays out the alternatives from laissez faire to managed trade and argues strongly for a new set of international ground rules to regulate acceptable behavior by government and firms in high tech industries Flamm s detailed analysis of competition within the semiconductor industry will be of great value to those interested in the industrial organization of high technology industries as well as those concerned with trade and technology policy international competition and Japanese industrial policies

Competition and Trade Policies Einar Hope, 2002-03-11 The relationship between competition and trade policies and the development of an effective competition policy for an integrated world economy is one of the most important and challenging issues policy makers currently face This book examines the current debates around competition and trade policy interactions and discusses the need for new policy initiatives in an international context

Productivity and Cyclicity in Semiconductors National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Measuring and Sustaining the New Economy, 2004-11-20 Hosted by Harvard University s Kennedy School of Government this symposium brought together leading technologists and economists to review technical challenges facing the semiconductor industry the industry s business cycle the interconnections between the two and the implications of growth in semiconductors for the economy as a whole This volume includes a summary of the symposium proceedings and three major research papers Topics reviewed encompass the industry technology roadmap challenges to be overcome to maintain the trajectory of Moore s Law the drivers of the continued growth in productivity in the U S economy and economic models for gaining a better understanding of this leading U S industry

Antidumping Laws and the U.S. Economy Greg Mastel, 2016-09-16 This volume reviews the goals operation and history of American antidumping laws coupled with a strategy for using those laws to promote U S trade policy and economic objectives in the post Uruguay Round GATT talks

Unwanted Company Jonathan Crystal, 2018-07-05 In the last quarter century the U S economy has been transformed by a large inflow of direct investment from abroad Foreign companies mainly from Europe and Japan have built factories and acquired U S firms at an ever increasing rate Jonathan Crystal finds inconsistencies in how American businesses have responded to this globalization of production U S firms especially multinationals have conflicting interests

regarding investment protection Crystal shows Many American firms under siege from overseas competitors have already expended considerable energy in obtaining trade protection but they are competing not only with foreign imports but also with locally established foreign owned firms American businesses may favor stricter regulation of foreign companies that threaten their bottom line but they also consider their own interests as global investors subject to retaliatory protection in other countries Restrictions on foreign investment it seems are not so attractive when they are imposed by other countries Unwanted Company examines the different ways in which important U S industries including semiconductors automobiles steel consumer electronics telecommunications and airlines reacted to this new challenge It focuses on the political responses of U S owned firms to how Washington ought to regulate foreign direct investment and how it ought to treat foreign owned firms in the United States Some industries welcomed or at least didn't oppose foreign investment whereas others sought restrictive and discriminatory policies Crystal demonstrates how the nature of the domestic political environment shapes the translation of economic interests into policy preferences

Deconstructing the Computer

National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Measuring and Sustaining the New Economy, Committee on Deconstructing the Computer, 2005-10-28 Starting in the mid 1990s the United States economy experienced an unprecedented upsurge in economic productivity Rapid technological change in communications computing and information management continue to promise further gains in productivity a phenomenon often referred to as the New Economy To better understand this phenomenon the National Academies Board on Science Technology and Economic Policy STEP has convened a series of workshops and commissioned papers on Measuring and Sustaining the New Economy This major workshop entitled Deconstructing the Computer brought together leading industrialists and academic researchers to explore the contribution of the different components of computers to improved price performance and quality of information systems The objective was to help understand the sources of the remarkable growth of American productivity in the 1990s the relative contributions of computers and their underlying components and the evolution and future contributions of the technologies supporting this positive economic performance

Asia's Computer Challenge Jason Dedrick, Kenneth L. Kraemer, 1998-08-20 How did the computer industry evolve into its present global structure Why have some Asian countries succeeded more than others Jason Dedrick and Kenneth L. Kraemer delve into these questions and emerge with an explanation of the rapid rise of the computer industry in the Asia Pacific region Asia's Computer Challenge makes a systematic comparison of the historical development of the computer industries of Japan Hong Kong Korea Singapore and Taiwan and concludes that neither a plan versus market nor a country versus company dichotomy fully explains the diversity found among these countries The authors identify a new force the emergence of a global production network Reaching beyond specific companies and countries this book explores the strategic implications for the Asian Pacific countries and the United States Now East Asia is faced with a challenge they must make the move from low margin hardware business to high margin software and information businesses while Americans must respond by maintaining leadership in standards design marketing and business innovation

Scoring 50 Years of US Industrial Policy, 1970-2020 Gary Clyde Hufbauer, Euijin Jung, 2021-11-29 Industrial policy is making a comeback in the United States It is more urgent than ever to understand how and whether industrial policy has worked to strengthen the US economy This study analyzes and scores 18 US industrial policy episodes implemented between 1970 and 2020 in an effort to assess what went right and what went wrong and how the current initiatives might fare The Peterson Institute for International Economics gratefully acknowledges the support of the Koch Foundation for this project

International Relations Theory and the Asia-Pacific G. John. Ikenberry, Michael Mastanduno, 2003-05-21 What will the Asia Pacific rim look like in the years ahead What tools will international relations theorists need to understand the complex relationship among China Japan and the United States as the three powers shape the economic and political future of this crucial region Some of the best and most innovative scholars in international relations and Asian area studies gather here with the working premise that stability in the broader Asia Pacific region is in large part a function of the behavior of and relationships among these three major powers Each author analyzes the foreign policy behavior of one or more of these states and or relations among them in an effort to make claims about the prospects for regional stability Some of the chapters focus on security relationships some on economic relations and some on the interaction of the two The authors do not promote any particular theoretical perspective but instead draw on the full diversity of theoretical approaches in contemporary international relations scholarship to illuminate international interactions among the Pacific powers The creative collaboration of international relations and Asian studies specialists presents the opportunity to assess the applicability of Western categories of analysis to the beliefs and behaviors of Asian actors The scholars in this volume share the conviction that a deeper understanding of the effects of cultural divides between Asian and American policymakers is essential if the Pacific rim's economic and regional security is to be safeguarded

Industrial Policy in an Era of Globalization Marcus Noland, Howard

Pack, 2003-03-07 Globalization reigns supreme as a description of recent economic transformation and it carries many meanings In the policy realm the orthodox terms of engagement have been enshrined in the Washington consensus But disappointing results in Latin America and transitional economies plus the Asian financial crisis have shaken the faith in Washington and elsewhere One response has been to hark back to the more statist policies that the consensus marginalized In this regard Japan Korea and Taiwan are promoted as the poster nations that have derived great benefits from increasing integration with the international economy without surrendering national autonomy in the economic or cultural spheres effectively beating the West at its own game The fundamental questions addressed in this monograph are whether industrial policy was indeed a major source of growth in these three economies and if so can it be replicated under current institutional arrangements and if so is it worth replicating or would developing countries today be better off embracing the suitably refined orthodoxy Securing the Future National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, 2003-06-08 Based on the deliberations of a high level international conference this report summarizes the presentations of an exceptional group of experts convened by Intel's Chairman Emeritus Gordon Moore and SEMATECH's Chairman Emeritus William Spencer The report documents the critical technological challenges facing this key industry and the rapid growth in government industry partnerships overseas to support centers of semiconductor research and production in national economies Importantly the report provides a series of recommendations designed to strengthen U S research in disciplines supporting the continued growth of semiconductor industry an industry which has made major contributions to the remarkable increases in productivity in the U S economy **Software, Growth, and the Future of the U.S Economy** National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, Committee on Measuring and Sustaining the New Economy, Committee on Software, Growth, and the Future of the U.S Economy, 2006-04-06 Starting in the mid 1990s the United States economy experienced an unprecedented upsurge in economic productivity Rapid technological change in communications computing and information management continue to promise further gains in productivity a phenomenon often referred to as the New Economy To better understand this phenomenon the National Academies Board on Science Technology and Economic Policy STEP has convened a series of workshops and commissioned papers on Measuring and Sustaining the New Economy This major workshop entitled Software Growth and the Future of the U S Economy convened academic experts and industry representatives from leading companies such as Google and General Motors to participate in a high level discussion of the role of software and its importance to U S productivity growth how software is made and why it is unique the measurement of software in national and business accounts the implications of the movement of the U S software industry offshore and related policy issues *Import Propensities of Industrialized Countries* J. Lutz, 2016-04-30 This volume analyzes the import patterns of selected countries to determine which nations are active importers and which ones import much less than expected The majority of the work

focuses on the industrialized countries which are at the center of the international trading system determining which are very active importers and which are not. Controls for wealth size and membership in customs areas are included. Countries importing at levels below predicted ones are the countries likely to be most effective at protecting domestic industries from foreign competition. For example, the results permit an evaluation of the arguments that Japan has consistently imported less than would be expected due to the presence of barriers protecting the domestic market.

Technology, Governance and Political Conflict in International Industries Tony Porter, 2002-03-28 This book makes an important theoretical contribution to our understanding of international institutions by exploring conceptually and empirically the impact of technology on the governance of international economic activities. Technology, Governance and Political Conflict in International Industries addresses the current intense interest among scholars.

Sources of Industrial Leadership David C. Mowery, Richard R. Nelson, 1999-10-13 This book describes and analyzes how seven major high tech industries evolved in the United States, Japan and Western Europe. The industries covered are machine tools, organic chemical products, pharmaceuticals, medical devices, computers, semiconductors and software. In each of these industries, firms located in one or a very few countries became the clear technological and commercial leaders. In a number of cases, the locus of leadership changed sometimes more than once over the course of the histories studied. The focus of the book is on the key factors that supported the emergence of national leadership in each industry and the reasons behind the shifts when they occurred. Special attention is given to the national policies that helped to create or sustain industrial leadership.

States Versus Markets Herman Mark Schwartz, 2018-11-28 Now in its fourth edition, this highly regarded and critically acclaimed textbook offers an authoritative introduction to international political economy. It is unique in offering an accessible broad introduction to the development of the global economy from its inception to today's complex relationship between states and markets in the midst of economic crises. Herman Mark Schwartz deftly shows that globalization is not a novel phenomenon but a recurrent process whereby markets have since the 16th century periodically redistributed economic activity. It links the production of goods and services in one region to the markets for those goods and shows how this can lead to conflicts among states that try to create, enhance or subdue the markets. Taking into account the continued rise of China and the recent shift towards populism in the West, this book has been extensively rewritten and updated throughout. This is a thought-provoking text which will encourage upper level undergraduate and postgraduate students to think analytically about the inevitability of a global market influencing a state's policies and geo-economic position and to locate their own thinking within the IPE tradition.

New to this Edition: Thoroughly updated to cover all major developments in global political economy since the financial crisis. Timelines in most chapters show key events in the evolution of the global economy. Offers a particularly clear account, now with chapter summaries, updated examples and a glossary of key terms.
