

The background of the slide is a photograph of a savanna landscape at sunset. The sky is a warm, golden-yellow color, and the sun is visible on the left side. Several acacia trees are silhouetted against the sky. In the foreground, a large, weathered hominid skull is shown, its surface reflecting the light from the sunset. The skull is positioned at the bottom of the frame, with its base and jaw area visible.

Missing Links In Search Of Human Origins:

Missing Links John Reader, 2011-10-27 This is the story of the search for human origins from the Middle Ages when questions of the earth's antiquity first began to arise through to the latest genetic discoveries that show the interrelatedness of all living creatures Central to the story is the part played by fossils first in establishing the age of the Earth then following Darwin in the pursuit of possible Missing Links that would establish whether or not humans and chimpanzees share a common ancestor John Reader's passion for this quest palaeoanthropology began in the 1960s when he reported for Life Magazine on Richard Leakey's first fossil hunting expedition to the badlands of East Turkana in Kenya Drawing on both historic and recent research he tells the fascinating story of the science as it has developed from the activities of a few dedicated individuals into the rigorous multidisciplinary work of today His arresting photographs give a unique insight into the fossils the discoverers and the settings His vivid narrative reveals both the context in which our ancestors evolved and also the realities confronting the modern scientist The story he tells is peopled by eccentrics and enthusiasts and punctuated by controversy and even fraud It is a celebration of discoveries Neanderthal Man in the 1850s Java Man 1891 Australopithecus 1925 Peking Man 1926 Homo habilis 1964 Lucy 1978 Floresiensis 2004 and Ardipithecus 2009 It is a story of fragmentary shards of evidence and the competing interpretations built upon them And it is a tale of scientific breakthroughs dating technology genetics and molecular biology that have enabled us to set the fossil evidence in the context of human evolution John Reader's first book on this subject Missing Links The Hunt for Earliest Man 1981 was described in Nature as the best popular account of palaeoanthropology I have ever read His new book covers the thirty years of discovery that have followed

Missing Links John Reader, 2011-10-27 What can a prehistoric skeleton tell us about human origins From Neanderthal Man to Lucy to the Flores Hobbits fossil finds have played a key part in the quest to understand our ancestry Author and photographer John Reader tells the fascinating story of breakthrough finds fiercely contested theories and a rapidly developing science

A Search for Origins Trefor Jenkins, Phil Bonner, Amanda Esterhuysen, 2007-10-01 A study of the Cradle of Humanity and its history The Cradle of Humankind COH bordering Gauteng and the North West Province was declared a World Heritage Site for the wealth of the human and animal fossils found there Research based on fossils found in the area as well as signs of early human habitation have shed new light on the evolution of humankind and on the significant role that southern Africa played in the development of modern humans A Search for Origins aims to provide an overview of the history of the COH and of the important discoveries that have been made there for a non specialist audience A number of general accounts have been written which have concentrated on the palaeontological discoveries made there No systematic account written by specialists in their disciplines has however been published about the wider history of the COH and surrounding areas In particular no overview spanning the evolution of early plant and animal life human

development and recent and colonial history as reflected in discoveries linked to the COH has been attempted This edited volume frames the scientific advances that have been made in the COH against the intellectual and political background out of which they emerged The multi disciplinary approach from a wide range of specialists is innovative and ground breaking

The Deeper Genome John Parrington,2017-10-06 Over a decade ago as the Human Genome Project completed its mapping of the entire human genome hopes ran high that we would rapidly be able to use our knowledge of human genes to tackle many inherited diseases and understand what makes us unique among animals But things didn t turn out that way For a start we turned out to have far fewer genes than originally thought just over 20 000 the same sort of number as a fruit fly or worm What s more the proportion of DNA consisting of genes coding for proteins was a mere 2% So was the rest of the genome accumulated junk Things have changed since those early heady days of the Human Genome Project But the emerging picture is if anything far more exciting In this book John Parrington explains the key features that are coming to light some such as the results of the international ENCODE programme still much debated and controversial in their scope He gives an outline of the deeper genome involving layers of regulatory elements controlling and coordinating the switching on and off of genes the impact of its 3D geometry the discovery of a variety of new RNAs playing critical roles the epigenetic changes influenced by the environment and life experiences that can make identical twins different and be passed on to the next generation and the clues coming out of comparisons with the genomes of Neanderthals as well as that of chimps about the development of our species We are learning more about ourselves and about the genetic aspects of many diseases But in its complexity flexibility and ability to respond to environmental cues the human genome is proving to be far more subtle than we ever imagined

Social Anthropology and Human Origins Alan Barnard, 2011-03-17 The study of human origins is one of the most fascinating branches of anthropology. Yet it has rarely been considered by social or cultural anthropologists who represent the largest subfield of the discipline. In this powerful study, Alan Barnard aims to bridge this gap. Barnard argues that social anthropological theory has much to contribute to our understanding of human evolution, including changes in technology, subsistence, and exchange; family and kinship; as well as to the study of language, art, ritual, and belief. This book places social anthropology in the context of a widely conceived constellation of anthropological sciences. It incorporates recent findings in many fields, including primate studies, archaeology, linguistics, and human genetics. In clear, accessible style, Barnard addresses the fundamental questions surrounding the evolution of human society and the prehistory of culture, suggesting a new direction for social anthropology that will open up debate across the discipline as a whole.

The Comprehensive Guide to Science and Faith William A. Dembski, Casey Luskin, Joseph M. Holden, 2021-10-05 Science and Faith can and do support each other. Emergence and Diversity of Modern Human Behavior in Paleolithic Asia Yousuke Kaifu, Masami Izuhara, Ted Goebel, Hiroyuki Sato, Akira Ono, 2015-02-15 Despite the obvious geographic importance of eastern Asia in human migration, its discussion in the context of the emergence and dispersal of modern humans has been rare. *Emergence and Diversity of Modern Human Behavior in Paleolithic Asia* focuses long-overdue scholarly attention on this under-studied area of the world. Arising from a 2011 symposium sponsored by the National Museum of Nature and Science in Tokyo, this book gathers the work of archaeologists from the Pacific Rim of Asia, Australia, and North America to address the relative lack of attention given to the emergence of modern human behavior as manifested in Asia during the worldwide dispersal from Africa.

Confronting Colonial Objects Carsten Stahn, 2023 *Confronting Colonial Objects* traces recurring justifications and contestations of takings and returns in colonial history through the life story of cultural objects. It develops a theory based on justice, ethics, and human rights that confronts ongoing historic legal and economic entanglements and enables normative transformation.

Studying Human Origins Raymond Corbey, Wil

Roebroeks, 2001 This history of human origin studies covers a wide range of disciplines This important new study analyses a number of key episodes from palaeolithic archaeology palaeoanthropology primatology and evolutionary theory in terms of various ideas on how one should go about such reconstructions and what if any the uses of such historiographical exercises can be for current research in these disciplines Their carefully argued point is that studying the history of palaeoanthropological thinking about the past can enhance the quality of current research on human origins The main issues in the present volume are the uses of disciplinary history in terms of present day research concerns the relative weight of cultural and other external contexts and continuity and change in theoretical perspectives The book's overall approach is an epistemological one It does not in other words primarily address anthropological data as such but our ways of handling such data in terms of our most fundamental but usually quite implicit theoretical presuppositions
