of fluorine can result in substantial functional changes in the biological as well as physicochemical properties of organic compounds. Incorporation of fluorine into drug molecules can greatly affect their physicochemical properties such as bond strength, lipophilicity, bioavailability, conformation, electrostatic potential, dipole moment, pKa, etc., as well as pharmacokinetic properties such as tissue distribution, rate of metabolism, and pharmacological properties such as pharmacodynamics and toxicology.

Ullmann's Fine Chemicals Wiley-VCH, 2014-01-07. A compilation of 76 articles from the ULLMANN's Encyclopedia of Industrial Chemistry. **Hazardous Chemicals** T.S.S. Dikshith, 2013-05-06. An easily accessible guide to scientific information. Hazardous Chemicals Safety Management and Global Regulations covers proper management, precautions, and related global regulations on the safety management of chemical substances. The book helps workers and safety personnel prevent and minimize the consequences of catastrophic releases of toxic, reactive, flammable, or explosive chemical substances, which often result in toxic or explosive hazards. It also details safety measures for transportation of chemical substances by different routes such as by road, rail, air, and sea. Discusses different aspects of potentially toxic and hazardous chemicals in simple and comprehensive language. Provides toxicity and health effects of chemicals in simple nontechnical language. Covers scientific information on hazardous and potentially dangerous chemical substances at workplaces. Offers fundamental knowledge about the biological and health effects of hazardous and potentially toxic chemicals in a comprehensive way. Includes recent developments on safety management of hazardous and potentially toxic chemicals and related global regulations. The author discusses the importance of knowledge in avoiding negligence during the use and handling of hazardous chemical substances. He stresses the importance of proper management and judicious application of each chemical substance irrespective of the workplace and eventually shows how safety and protection of the user, workplace, and the living environment can be achieved.

WHO Recommended Classification of Pesticides by Hazard and Guidelines to Classification 2009 International Program on Chemical Safety, World Health Organization, 2010 The WHO Recommended Classification of Pesticides by Hazard was approved by the 28th World Health Assembly in 1975 and has since gained wide acceptance When it was published in the WHO Chronicle 29 397 401 1975 an annex which was not part of the Classification illustrated its use by listing examples of classification of some pesticidal active ingredients and their formulations Later suggestions were made

by Member States and pesticide registration authorities that further guidance should be given on the classification of individual pesticides Guidelines were first issued in 1978 and have since been revised and reissued every few years Up until the present revision the original guidelines approved by the World Health Assembly in 1975 have been followed without amendment In December 2002 the United Nations Committee of Experts on the Transport of Dangerous Goods and on the Globally Harmonized System of Classification and Labelling of Chemicals UNCETDG GHS approved a document called The Globally Harmonized System of Classification and Labelling of Chemicals with the intent to provide a globally harmonized system<sup>1</sup> GHS to address classification of chemicals labels and safety data sheets The GHS with subsequent revisions is now being widely used for the classification and labeling of chemicals worldwide For this revision of the Classification the WHO Hazard Classes have been aligned in an appropriate way with the GHS Acute Toxicity Hazard Categories for acute oral or dermal toxicity as the starting point for allocating pesticides to a WHO Hazard Class with adjustments for individual pesticides where required It is anticipated that few of the more toxic pesticides will change WHO Hazard Class as a result of this change As has always been the case the classification of some pesticides has been adjusted to take account of severe hazards to health other than acute toxicity as described in Part II The GHS Acute Toxicity Hazard Category for each pesticide is now presented alongside the existing information Page 1
