Environmental Protection Agency Washington D C The efforts of the Exposure and Hazard Assessment Working Group were
focused on the exchange of information on a variety of topics including research projects regulations statutes analytical
laboratories and methods of exposure risk assessment involving CDDs and CDFs It was evident to the leaders of the Working
Group that several of the knowledge voids had to be addressed on a fundamental level before expanded efforts could be
made Several questions needed to be answered Who has done research on this topic and what do the data indicate Who is
performing research now and what are their capabilities How are other nations addressing this problem and do they have
legislative mandates in place Is there a general consensus on the topic The members of the Working Group believed that
these questions could be answered by surveying the major participants in the field of interest Three principal survey efforts
were performed by the Working Group which collected information on research regulations statutes and analytical
laboratories from each of the participating nations In addition to answering these fundamental questions these efforts also
fulfilled the major objectives of the entire Pilot Study The collection analysis and distribution of information on research
projects regulations statutes and analytical laboratories were very useful efforts in helping to fill some of the basic
knowledge voids **Current Catalog** ,1991 First multi year cumulation covers six years 1965 70 **Das Toxikologiebuch**
