Sustainable Production of Ethnic Alcoholic Beverages Nicolás Oscar Soto-Cruz,Manuel Reinhart Kirchmayr,Avinash Sharma,2022-03-31 Microorganisms and Fermentation of Traditional Foods Ramesh C. Ray, Montet Didier,2014-08-21

The first volume in a series covering the latest information in microbiology biotechnology and food safety aspects this book is divided into two parts Part I focuses on fermentation of traditional foods and beverages such as cereal and milk products from the Orient Africa Latin America and other areas Part two addresses fermentation biolog Microbial Fermentations in Nature and as Designed Processes Christon J. Hurst,2023-07-31

MICROBIAL FERMENTATIONS IN NATURE AND AS DESIGNED PROCESSES Fermentation is one of the most important metabolic tools that biology has developed and microorganisms in many ways seem to have become the true masters of fermentative metabolism Each of the fermentative microbial functions evolved to fit an energetic opportunity and each function has ecological value This book provides its readers with Understanding regarding the commonalities and distinctions between aerobic and anaerobic fermentations as performed by microorganisms A summary of knowledge regarding the ways in which animals and plants depend upon symbiotic interactions with their fermenting microbial partners including the deconstruction of complex polysaccharides Information is also included about how those natural technologies constitute adaptation into designed processes for anaerobic degradation of lignocellulosic materials The important role of rhizosphere microbes that facilitate availability of inorganic and organic phosphates for plants These phosphates get stored in the plant s seeds After ruminant animals ingest the seeds enzymes produced by gastrointestinal microbial fermentation allow the animals to utilize their dietary phosphates History of how microbial fermentation has been harnessed from prehistoric times to the present for processing and preserving food products for humans and fodder for our domesticated animals Insight into the ways that microbial fermentations are used as an engineering tool for producing chemicals including enzymes and pharmaceuticals which improve the health of ourselves and our domesticated animals Perspectives on possible future research directions for the field of applied microbial fermentation that will help to advance agriculture and industry **Science and Technology of Fruit Wine Production** Maria R. Kosseva,V.K. Joshi,P.S. Panesar,2016-11-01

Science and Technology of Fruit Wine Production includes introductory chapters on the production of wine from fruits other than grapes including their composition chemistry role quality of raw material medicinal values quality factors bioreactor technology production optimization standardization preservation and evaluation of different wines specialty wines and brandies Wine and its related

products have been consumed since ancient times not only for stimulatory and healthful properties but also as an important adjunct to the human diet by increasing satisfaction and contributing to the relaxation necessary for proper digestion and absorption of food. Most wines are produced from grapes throughout the world; however, fruits other than grapes including apple, plum, peach, pear, berries, cherries, currants, apricot, and many others can also be profitably utilized in the production of wines. The major problems in wine production, however, arise from the difficulty in extracting the sugar from the pulp of some of the fruits or finding that the juices obtained lack in the requisite sugar contents, have higher acidity, more anthocyanins, or have poor fermentability. The book demonstrates that the application of enzymes in juice extraction, bioreactor technology, and biological deacidification (MLF bacteria or deacidifying yeast like *Schizosaccharomyces pombe* and others) in wine production from non-grape fruits needs serious consideration. Focuses on producing non-grape wines, highlighting their flavor, taste, and other quality attributes, including their antioxidant properties. Provides a single volume resource that consolidates the research findings and developed technology employed to make wines from non-grape fruits. Explores options for reducing post-harvest losses, which are especially high in developing countries. Stimulates research and development efforts in non-grape wines.

Gálvez Ranilla, 2025-10-31 Fermentation based processing advanced with global food systems as humanity started to organize the domestication of agriculture from plant and animal sources. These advances emerged across regions of the world from river valley civilizations in Asia, Mesopotamia, India, and China, and Africa, Egypt, to Meso American civilizations. As food crops and animal foods emerged from domestication to advancements in post harvest processing stages, growth of invisible microbial systems led to modified foods that aligned with local palates of the communities. This in several cases became part of food systems as it added a mode of preservation and improved the food quality that was preferred by each community. This is how the early genesis of fermented foods from grains, fruits, and vegetables to animal meats and milk products became an integral part of early civilizations over 4000 years ago and has now carried over and further developed across many countries in every region of the world. The foundations of these food fermentations are now an integral part of modern food advances as preferred food substrates and the microbial interactions that drive the metabolic processes in defined food matrixes are being scientifically advanced. This book focuses on bringing together diverse emergences and advancements of fermented foods across different regions of the world and how the metabolic processes associated with fermentation in several cases add health relevant functional qualities across different food matrixes. This book contains 26 chapters from the Americas, Africa, Europe, and Asia bringing together the fermentation processes of diverse food substrates and their microbial processing and in several cases providing health targeted functional benefits.

Key Features: Discusses the rationale and basis of fermented food systems from across 26 diverse regions of the world with examples from the Americas, Asia, Europe, and Africa. Presents historical plant and animal food substrates and the metabolic processes of their fermentation across traditions of a range of countries. Covers traditional food fermentations across diverse food substrates that have potentially health relevant functional benefits. Reflects and presents the role of historical, cultural, and traditional food concepts of a diverse range of countries with many novel examples and how they have influenced health relevant functional benefits. Discusses the relevance of metabolic concepts of fermented and functional foods in advancing healthy food concepts. This book is important for food scientists, nutritionists, and the health care sector but beyond this it is also relevant for a wider global audience interested in a holistic health approach from food systems where examples of fermentation experience can inform new natural processing strategies to improve food quality and health.
