Clean Energy Urban Design Dennis Frenchman,P. Christopher Zengras,2015-01-30 Clean Energy Urban Design The Energy Proforma in Practice and Policy offers a new way of understanding urban energy consumption in fast growing China by asking a simple question How does the design of neighborhoods affect energy consumption Four years of research including interviews of 4 500 families and statistical modeling of their energy usage led MIT researchers Dennis Frenchman and Chris Zengras to conclude that people living in better designed neighborhoods will consume less energy in their daily patterns of life Frenchman and Zengras take their findings a step further by making the results of their work accessible to the public through the online Energy Proforma <http://energyproforma.mit.edu> a tool that allows designers policymakers and the rest of us to rapidly assess the comprehensive energy performance of a neighborhood while it is being designed or after it is built The Proforma provides the basis for design and policy recommendations included in the book as well as illustrative neighborhood designs developed using the Proforma in the test city of Jinan China Clean Energy Urban Design The Energy Proforma in Practice and Policy is a visionary yet highly practical approach to developing more sustainable low carbon cities one neighborhood at a time

From Smart Grids to Smart Cities Massimo La Scala,Sergio Bruno,Carlo Alberto Nucci,S. Lamonaca,Ugo Stecchi,2017-01-05 This book addresses different algorithms and applications based on the theory of multiobjective goal attainment optimization In detail the authors show as the optimal asset of the energy hubs network which i meets the loads ii minimizes the energy costs and iii assures a robust and reliable operation of the multicarrier energy network can be formalized by a nonlinear constrained multiobjective optimization problem Since these design objectives conflict with each other the solution of such the optimal energy flow problem hasn't got a unique solution and a suitable trade off between the objectives should be identified A further contribution of the book consists in presenting real world applications and results of the proposed methodologies developed by the authors in three research projects recently completed and characterized by actual implementation under an overall budget of about 23 million

Metropolis Alexis Marie Wheeler,Massachusetts Institute of Technology. Department of Urban Studies and Planning,Massachusetts Institute of Technology. Center for Real Estate. Program in Real Estate Development,2013 In China s current landscape the paradigm for urban development is the rapid creation of whole neighborhoods instead of the conventional piecemeal approach of creating individual buildings that gradually aggregate over time into neighborhoods China s approach is complex and fast moving and has resulted in the highly repetitive form of tower in park typology being applied throughout the country to develop new neighborhoods This development strategy creates living environments that require households to adopt patterns of daily living that consume excessive resources and needlessly contribute to climate degradation by relying on mechanically controlled interior climates in neighborhoods requiring excessive dependence upon automobiles This situation presents compelling opportunities for planners and designers to create a more energy efficient city form What is required is an effective method of accurately predicting during the design process patterns of neighborhood energy consumption This thesis presents guidelines for doing this When partnered with the Energy Proforma the guidelines can help make possible rapid yet highly energy efficient urban design and development at the neighborhood scale Development of these guidelines drew upon the research of the Making the Clean Energy City in China Research Group led by Dennis Frenchman and Christopher Zengras Other resources include literature describing previous approaches to neighborhood scale designs and guidelines and an examination of current and emerging practices in the field of urban design and development Finally student projects are incorporated into the thesis and interwoven with the guidelines to illustrate the forms that potential developments might take **The Renewable City** Peter Droege,2006 Despite the intolerable costs of climate change and inevitably declining oil natural gas and uranium reserves the vast majority of cities and urban communities are planned and managed as if such existential crises did not exist Hence the transition from fossil fuel dominated cities to an urban future marked by a radically new renewable energy infrastructure requires entirely new tools and frames of decision making This is an original guide to an entirely unprecedented urban transformation to cities and towns powered by renewable energy Squarely focused on action it supports design planning and management decisions and serves as a practical guide to practitioners academics and political leaders in communities and cities worldwide as a useful and well structured reference text It is built on the most successful of past and present urban sustainability trends and emerging infrastructure directions presenting renewable energy applications as offering new and inevitable approaches to urban infrastructure planning and the design of cities Urban Energy Transition Peter Droege,2018-08-12 Urban Energy Transition second edition is the definitive science and practice based compendium of energy transformations in the global urban system This volume is a timely and rich resource for all as citizens companies and their communities from remote
