Ontological Relativity and Other Essays Willard Van Orman Quine, 1969 Intended to clarify the meaning of the philosophical doctrines propounded by W V Quine in *Word and Objects* the essays included herein are intimately related and concern themselves with three philosophical preoccupations the nature of meaning the meaning of existence and the nature of natural knowledge Ontological Relativity and Other Essays W. Ontological Relativity W. V. Quine, 1968 Feminist Interpretations of W. V. Quine Jack Nelson, 2010-11-01 As one of the preeminent philosophers of the twentieth century W V Quine 1908 2000 made groundbreaking contributions to the philosophy of science mathematical logic and the philosophy of language This collection of essays examines Quine s views particularly his holism and naturalism for their value and their limitations to feminist theorizing today Some contributors to this volume see Quine as severely challenging basic tenets of the logico empiricist tradition in the philosophy of science the analytic synthetic distinction verificationism foundationalism and accept various of his positions as potential resources for feminist critique Other contributors regard Quine as an unrepentant empiricist and unlike feminists who seek to use or extend his arguments they interpret his positions as far less radical and more problematic In particular critics and advocates of Quine s arguments that the philosophy of science should be naturalized understood and pursued as an enterprise continuous with the sciences proper disagree deeply about whether such a naturalized philosophy is philosophy enough Central issues at stake in these disagreements reflect current questions of special interest to feminists and also bridge the analytic and postmodern traditions They include questions about whether and how the philosophy of science as a form of practice is or can be normative as well as questions concerning the implications of Quine s philosophy of language for the transparency and stability of meaning In representing feminist philosophy centrally engaged with the analytic tradition this volume is important not only for what it contributes to the understanding of Quine and naturalized epistemology but also for what it accomplishes in working against restrictive conceptions of the place of feminism within the discipline Aside from the editors the contributors are Kathryn Pyne Addelson Louise M Antony Richmond Campbell Lorraine Code Jane Duran Maureen Linker Phyllis Rooney and Paul A Roth Pragmatism without Foundations 2nd ed Joseph Margolis, 2007-04-26 In this remarkable book Joseph Margolis one of America s leading and most celebrated philosophers examines the relationship between two apparently contradictory philosophical tendencies realism and relativism In order to examine the relationship between the two Margolis establishes a taxonomy of different kinds of realism and different kinds of relativism Drawing on both the analytic and Continental traditions he examines from a pragmatic point of view the various relationships between these two tendencies in the light of two major developments in modern philosophy the concern for praxis and the concern for historicity Twenty years after it was first published to great acclaim Margolis has updated *Pragmatism Without Foundations*

in the light of his most recent work and the development of pragmatism in the intellectual world This second edition includes an updated preface and a brand new epilogue addressing these developments and their implications for his earlier work

J. Lowe, A. Rami, 2014-12-05 Truth depends in some sense on reality But it is a rather delicate matter to spell this intuition out in a plausible and precise way According to the theory of truth making this intuition implies that either every truth or at least every truth of a certain class of truths has a so called truth maker an entity whose existence accounts for truth This book aims to provide several ways of assessing the correctness of this controversial claim This book presents a detailed introduction to the theory of truth making which outlines truth maker relations the ontological category of truth making entities and the scope of a truth maker theory The essays brought together here represent the most important articles on truth making in the last three decades as well as new essays by leading researchers in the field of the theory of truth and of truth making **Reflecting Davidson** Ralf Stoecker, 2011-09-12 No detailed description available for Reflecting Davidson *Metaphysics* Bruce Aune, 1985 Comprehensive introductory survey of the key concepts and problems in traditional and contemporary metaphysics A comprehensive introductory study of the key concepts and problems in traditional and contemporary metaphysics Aune presents and defends a point of view that is naturalistic nominalistic and pragmatic an approach that has the overall advantage of providing a coherent structured view of the topics he discusses

Environments of Intelligence Hajo Greif, 2017-09-01 What is the role of the environment and of the information it provides in cognition More specifically may there be a role for certain artefacts to play in this context These are questions that motivate 4E theories of cognition as being embodied embedded extended enactive In his take on that family of views Hajo Greif first defends and refines a concept of information as primarily natural environmentally embedded in character which had been eclipsed by information processing views of cognition He continues with an inquiry into the cognitive bearing of some artefacts that are sometimes referred to as intelligent environments Without necessarily having much to do with Artificial Intelligence such artefacts may ultimately modify our informational environments With respect to human cognition the most notable effect of digital computers is not that they might be able or become able to think but that they alter the way we perceive think and act The Open Access version of this book available at <http://www.tandfebooks.com/doi/view/10.4324/9781315401867> has been made available under a Creative Commons CC BY licence

Types and Tokens Linda Wetzel, 2009-07-31 A consideration of the distinction between the spatiotemporal furniture of the world tokens and the types of which they are instances and an argument that types exist There is a widely recognized but infrequently discussed distinction between the spatiotemporal furniture of the world tokens and the types of which they are instances Words come in both types and tokens for example there is only one word type the but there are numerous tokens of it on this page as do symphonies bears chess games and many other types of things In this book Linda Wetzel examines the distinction between types and tokens and argues that types exist as abstract objects since they lack a unique spatiotemporal location Wetzel demonstrates the ubiquity of references to and quantifications over types in science and ordinary language types have to be reckoned with and cannot simply be swept under the rug Wetzel argues that there are such things as types by undermining the epistemological arguments against abstract objects and offering extended original arguments demonstrating the failure of nominalistic attempts to paraphrase away such references to and quantifications over types She then focuses on the relation between types and their tokens especially for words showing for the first time that there is nothing that all tokens of a type need have in common other than being tokens of that type Finally she considers an often overlooked problem for realism having to do with types occurring in other types such as words in a sentence and proposes an important and original solution extending her discussion from words and expressions to other types that structurally involve other types flags and
