The First 30 Years of the ESPR Herbert J. Kaufmann, Hans Ringertz, Elisabeth Sweet, 2012-12-06 Our society is entering its fourth decade of existence as of the 30th Annual Meeting in London and we felt that this event merited reflection a look back into the past so as to better appreciate where we come from and where our sub speciality stands today also in order to understand our colleagues from the different areas in Europe It is our hope that paediatric radiology in Europe will thereby be strengthened now that old barriers have fallen At the second conjoint meeting of the ESPR and the SPR in Stockholm in 1991 a group of senior pediatric radiologists from all parts of Europe who felt that this occasion should be marked took the initiative to produce a book on the history of paediatric radiology focussing on the developments leading to the creation of the ESPR We thank all the colleagues who participated in the initial meeting to plan this book in Stockholm

in 1991 and again at the Budapest Meeting in 1992 and who subsequently prepared contributions for it These are the authors of the respective chapters and with them we hope that our readers will appreciate this effort Unfortunately we were not able to cover every European country in spite of our attempt to do so

Evidence-Based Imaging in Pediatrics Hansel J. Otero, Summer L. Kaplan, L. Santiago Medina, C. Craig Blackmore, Kimberly E. Applegate, 2024-08-31 This book provides evidence based guidance for pediatric imaging to radiologists pediatricians and all subspecialists caring for children as well as policy advocates While the majority of pediatric radiology books concentrate on diagnosis this book highlights how imaging should be used in optimal care allowing comparisons between different modalities and addressing follow up complications and the issue of timing of imaging The primary objective of this book is to provide a summary of appropriate imaging use in terms of modality and timing based on the best available evidence The book therefore acts as a resource for optimized clinical care of children and effective decision making A secondary objective is to collate the evidence based practices that constitute quality care for children in the setting of value based imaging Radiologists are often in the position of helping clinicians decide when and how to image children with suspected diseases or confirmed diagnoses However traditional residency training has done little to fulfill the need for this up to date evidence knowledge Moreover in spite of furthering subspecialization of the field the great majority of children s imaging and care occur outside of children s hospitals where clinicians and radiologist might need this type of general guidance for establishing best practices The book is divided in two parts non diagnostic considerations such as evidence based imaging safety value and the practice of radiology in low resource settings and a second larger clinical component divided in prenatal oncology neurological musculoskeletal cardiothoracic and abdominal imaging This new edition incorporates changes in practice and guidelines in the decade since the first edition was written with many new chapters in emerging topics including prenatal oncology and neurological imaging This is an ideal guide for radiologists pediatricians policy advocates and all healthcare professionals caring for children
