Microprocessors in Robotic and Manufacturing Systems S.G. Tzafestas,2012-12-06 Microprocessors play a dominant role in computer technology and have contributed uniquely in the development of many new concepts and design techniques for modern industrial systems This contribution is excessively high in the area of robotic and manufacturing systems However it is the editor's feeling that a reference book describing this contribution in a cohesive way and covering the major hardware and software issues is lacking The purpose of this book is exactly to fill in this gap through the collection and presentation of the experience of a number of experts and professionals working in different academic and industrial environments The book is divided in three parts Part 1 involves the first four chapters and deals with the utilization of microprocessors and digital signal processors DSPs for the computation of robot dynamics The emphasis here is on parallel computation with particular problems attacked being task granularity task allocation scheduling and communication issues Chapter 1 by Zheng and Hemami is concerned with the real time multiprocessor computation of torques in robot control systems via the Newton Euler equations This reduces substantially the height of the evaluation tree which leads to more effective parallel processing Chapter 2 by D Hollander examines thoroughly the automatic scheduling of the Newton Euler inverse dynamic equations The automatic program decomposition and scheduling techniques developed are embedded in a tool used to generate multiprocessor schedules from a high level language program Proceedings ,1989 Rare-earth Iron Permanent Magnets J. M. D. Coey,1996 Rare earth iron permanent magnets combine the magnetization of iron or cobalt with the anisotropy of a light rare earth in intermetallic compounds which exhibit nearly ideal hysteresis The rare earth iron magnets are now indispensable components of a vast range of electronic and electromechanical devices This book covers the principles of permanent magnetism magnet processing and applications in a series of interlocking chapters written by experts in each area Born of experience of the Concerted European Action on Magnets it is a definitive account of the field designed to be read by physicists materials scientists and electrical engineers *Flying Magazine* ,1975-02 Special Electrical Machinery Jigneshkumar P. Desai,2024-07-30 This book is a comprehensive guide to specialized motors providing in depth information on the operating principles applications and controls of various special electrical machines It covers a

range of special machines including switched reluctance motors permanent magnet synchronous machines brushless direct current motor stepper motors universal motors and hysteresis motors The book also addresses the issue of torque ripple Much of the literature available today focuses solely on conventional motors and their controls like induction motors synchronous motors PMDC motors servo machines and transformers This book takes a broader view addressing the growing trend toward specialized motors tailored to specific applications and new innovations in control and modification It aims to offer comprehensive insights into these special machines by providing detailed information on their operating principles applications and controls This exciting new volume Provides application based examples of machines not covered in other books on special machines Provides context for the use of special machines used in electric vehicle technology Gives examples which are helpful for industry practices Audience Undergraduate students post graduate students researchers and industry professionals who study and use special machines
