Statistics with R provides a guide to elementary matrix algebra sufficient for undertaking specialized courses such as
multivariate data analysis and linear models It also covers advanced topics such as generalized inverses of singular and
rectangular matrices and manipulation of partitioned matrices for those who want to delve deeper into the subject The book
introduces the definition of a matrix and the basic rules of addition subtraction multiplication and inversion Later topics
include determinants calculation of eigenvectors and eigenvalues and differentiation of linear and quadratic forms with
respect to vectors The text explores how these concepts arise in statistical techniques including principal component analysis
canonical correlation analysis and linear modeling In addition to the algebraic manipulation of matrices the book presents
numerical examples that illustrate how to perform calculations by hand and using R Many theoretical and numerical
exercises of varying levels of difficulty aid readers in assessing their knowledge of the material Outline solutions at the back
of the book enable readers to verify the techniques required and obtain numerical answers Avoiding vector spaces and other
advanced mathematics this book shows how to manipulate matrices and perform numerical calculations in R It prepares
readers for higher level and specialized studies in statistics The Healing Remedies Sourcebook C. Norman
