Palladio Virtuel Peter Eisenman:

Palladio Virtuel, 2012 **From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman**

Stefano Corbo, 2016-04-15 Peter Eisenman is one of the most controversial protagonists of the architectural scene who is known as much for his theoretical essays as he is for his architecture. While much has been written about his built works and his philosophies, most books focus on one or the other aspect. By structuring this volume around the concept of form, Stefano Corbo links together Eisenman's architecture with his theory. *From Formalism to Weak Form: The Architecture and Philosophy of Peter Eisenman* argues that form is the sphere of mediation between our body, our inner world and the exterior world and as such it enables connections to be made between philosophy and architecture. From the start of his career on, Eisenman has been deeply interested in the problem of form in architecture and has constantly challenged the classical concept of it. For him, form is not simply a cognitive tool that determines a physical structure which discriminates all that is active from what is passive, what is inside from what is outside. He has always tried to connect his own work with the cultural manifestations of the time: firstly under the influence of Colin Rowe and his formalist studies; secondly by re-interpreting Chomsky's linguistic theories in the 80s by collaborating with Derrida and his deconstructivist approach; more recently by discovering Henri Bergson's idea of Time. These different moments underline different phases, different projects, different programmatic manifestos and above all, an evolving notion of form. Taking a multi-disciplinary approach based on the intersections between architecture and philosophy, this book investigates all these definitions and in doing so provides new insights into and a deeper understanding of the complexity of Eisenman's work. *Peter Eisenman* Vladan Djokić, Petar

Bojanić, 2017-05-30 T00:00:00+02:00 Peter Eisenman discusses with architects and philosophers Jörg H. Gleiter (Germany), Kim F. Rister (Switzerland), Preston Scott Cohen (USA), Emmanuel Petit (USA), Mario Carpo (USA), Sarah M. Whiting (USA), Manuel Orazi (Italy), John McMorrough (USA), Gabriele Mastrigli (Italy), Panayotis Pangalos (Greece), Cynthia Davidson (USA), Ingeborg M. Røcker (USA), Alejandro Zaera Polo (USA), Djordje Stojanović (Serbia), Greg Lynn (USA) performing on the stage for two days in Belgrade. Through the structure of the monograph, the book represents a dynamic approach to the development of contemporary architectural thought. The dialogue between architects and philosophers with different social and cultural roots creates new agreements and reflections. **Architectural Possibilities in the Work of Eisenman** Michael Jasper, 2022-11-11 This

book examines the central decades of Peter Eisenman's work through a formal and thematic analysis of key architectural projects and writings, revealing underlying characteristics and arguing for their productive continuity and transformative role. The book explores Eisenman's approach to architectural form generation and thinking. It does this through a thematic and formal analysis of projects and writings from the mid 1970s to the mid 1990s. Following an introductory chapter addressing the theme of potentialities, the book is organised in two parts. The first part focuses on key period writings of Eisenman framing the close reading around a practice of resistance: the architect's approach to history as analysis and the

transformative conceptualisation of time In the second part the book undertakes an analysis of select projects from the 1980s and 1990s Three formal preoccupations and conceptual orientations ground manipulations figuration and spatial events organise this part of the book Previously unpublished material from the Peter Eisenman fonds Canadian Centre for Architecture Montréal provides primary source material A concluding chapter addresses Eisenman's teaching its relation to his larger project and possible legacies for educators practitioners scholars and theorists The Mannerist Phase in Architecture Lina Malfona, 2025-05-02 This book frames mannerism as an inescapable stage in the creative process The mannerist phase is usually an adolescent stage of language preceding the consolidation of thought It is that period as fertile as it is anguished in which each author engages in a dialogue with his or her past reinterpreting or completely transforming it The mannerist phase is that period when architects design spaces not yet knowing what it means to design places The mannerist condition can be short lived or protracted until it becomes systemic In all cases it is a period of research experienced by architects who are also intellectuals that is architects who operate between the practice of making and the elaboration of a personal design philosophy within a perspective in which history theory and criticism are intertwined In this sense the mannerist condition can also be defined as the style of the academic thought The book explores the work of many authors analyzing their relationship to history and how they managed to emerge from its shadow Of interest to academics scholars and students exploring the theory of architecture this book offers an unconventional transtemporal reading of mannerism where facts events and images belonging to different times and spaces are juxtaposed to generate a series of temporal paradoxes *Innovative tools and design strategies. The case of Eclectic Architecture in Buenos Aires* Garrido, Federico Andrés, 2023-05-26 The research deals with a question about Architecture and its design strategies combining historical information and digital tools Design strategies are historically defined they rely on geometry context building technologies and other factors The study of Architecture's own history particularly in the verge of technological advancements like the introduction of new materials or tools may shed some light on how to internalize digital tools like parametric design and digital fabrication *The Venice Variations* Sophia Psarra, 2018-04-30 From the myth of Arcadia through to the twenty first century ideas about sustainability how we imagine better urban environments remain persistently relevant and raise recurring questions How do cities evolve as complex spaces nurturing both urban creativity and the fortuitous art of discovery and by which mechanisms do they foster imagination and innovation While past utopias were conceived in terms of an ideal geometry contemporary exemplary models of urban design seek technological solutions of optimal organisation The Venice Variations explores Venice as a prototypical city that may hold unique answers to the ancient narrative of utopia Venice was not the result of a preconceived ideal but the pragmatic outcome of social and economic networks of communication Its urban creativity though came to represent the quintessential combination of place and institutions of its time Through a discussion of Venice and two other works owing their inspiration to this city Italo

Calvin's Invisible Cities and Le Corbusier's Venice Hospital Sophia Psarra describes Venice as a system that starts to resemble a highly probabilistic algorithm that is a structure with a small number of rules capable of producing a large number of variations. The rapidly escalating processes of urban development around our big cities share many of the motivations for survival, shelter, and trade that brought Venice into existence. Rather than seeing these places as problems to be solved, we need to understand how urban complexity can evolve as happened from its unprepossessing origins in the marshes of the Venetian lagoon to the model city that endured a thousand years. This book frees Venice from stereotypical representations, revealing its generative capacity to inform potential other Venices for the future. **Philosophical**

Difference and Advanced Computation in Architectural Theory Jefferson Ellinger, 2021-09-30 This book presents a new take on the evolution of digital design theories in architecture from modernity to today as they have been inspired both by contemporary philosophy and the emergence and access to advanced computation. It focuses on how concepts of difference in philosophy transformed architectural design theory and takes on even more significance with the introduction and ubiquitous use of computers within the discipline, changing the architectural design paradigm forever. Beginning with a presentation of American Pragmatism's push towards process, the book continues on to Husserl's influence on the modern movement, mid-century phenomenology, post-structuralist Derridean exchanges with architects, the Deleuzian influence on the smoothing of form, and finally contemporary architectural references to speculative realism. Analyzing the arc of design theory as influenced by philosophical and computational logics, this book presents the transformation to contemporary design approaches that includes more biology, more data, and more information, moving from less is more to From Less to More. **Philosophical Difference and Advanced Computation in Architectural Theory** is an influential read for students and academics of architectural theory, computational design, and related areas. *Mathematical Thinking and Properties in Architecture* Ju

Hyun Lee, Michael J. Dawes, Michael J. Ostwald, 2025-06-30 This monograph explores the profound connections between architecture and mathematics through the works of Andrea Palladio, Le Corbusier, and Peter Eisenman. Combining historical insights with computational analyses, it examines the social, spatial, and aesthetic properties of twenty-six iconic designs. Advanced methods such as Space Syntax, isovists, fractal analysis, image segmentation, and semantic linguistic analysis reveal the mathematical principles underlying architectural thinking and properties. Richly illustrated with over 100 visuals, this volume is an essential resource for senior undergraduates, postgraduates, practicing architects, and historians seeking a deeper understanding of mathematical thinking in architectural design and analysis. *Zero Piranesi* Jeffrey Kipnis, Stephen Turk, Michael Young, Giacomo Pala, Parsa Khalili, Marrikka Trotter, Peter Eisenman, 2019-11-01 ZERO PIRANESI Giovanni Battista Piranesi's engravings Campo Marzio dell'antica Roma of 1762 have a peculiar position within the discipline of architecture. With their dissemination, the folio collection of six etchings has till this day nurtured architects' speculations on the city. Since the Enlightenment, they and in particular the Campo Marzio plan have fuelled research discussions and visions

for the future of architecture These engravings are also some of the most beautiful documents in Western architectural history Zero Piranesi is guest edited by Peter Trummer It celebrates Piranesi's vision of ancient Rome and the disciplinary search of the endless realities within his Campo Marzio plan of Rome For Trummer Zero Piranesi suggests an architectural methodology based on a theory of replacement With it Piranesi's plan of Rome is transformed into an Object Plan a plan where multiple authors various positions are absorbed Thus the Object Plan contains a kaleidoscope of ideas which form a crust of architectural speculations accumulated within Zero Piranesi presents the seminal projects of Peter Eisenman and amongst others Michael Young and Marikka Trotter Trummer's own version of Campo Marzio comprises of drawings and a text that together construct Zero Piranesi Finally the journal features the award winning projects of St del

Architecture Constructed Mark Jarzombek, 2023-04-06 Architecture Constructed explores the central open secret of architecture the long suppressed conflict between arche and tecton between those who design and those who build This unresolved tension has a centuries old history in the discipline persisting through Classical and Renaissance times to the present day and yet it has rarely been addressed through a historical and theoretical lens In this book acclaimed architectural theorist Mark Jarzombek examines this tension head on and uses it to rethink the nature of the history of architecture He reveals architecture to be a troubled interconnected realm incomplete and unstable where labor craft and occupation are the invisible complements to the work of the architect Erudite entertaining and full of surprising and thought provoking juxtapositions and challenges Architecture Constructed is packed with novel insights into the internal conflicts and paradoxes of architecture and is rich with examples from modern and contemporary practice including Mies Koolhaas Potrc Hadid Bawa Diller Scofidio which demonstrate how contemporary architecture inhabits the very same tensions that have riven the discipline since the days of Alberti This provocative book will stimulate conversations among students researchers and designers as it pushes the boundaries on how we define the professional discipline of architecture and overturns entrenched assumptions about the nature of architectural history and theory

Artificial Intelligence in Architecture Matias del Campo, 2024-05-13 Artificial intelligence AI applications in architectural design have achieved a critical mass and exploded into the mainstream of architectural imaginations From practical applications in design and construction to the implications for architectural theory to a plethora of novel tools for accelerated morphological studies what has become clear is that the discipline is passing a threshold that fundamentally changes architecture as a whole However the most radical change is the interrogation and novel discussion of authorship and agency in design ecologies driven by synthetic imaginations What does it mean for authorship when more than 50 per cent of the content is generated by a nonhuman player This issue seems more pressing than ever In a world that is being transformed by AI on a daily basis what is the role of the sole genius and designers artists and architects This AD dives deep into current discussions about the human position in architectural design which is increasingly entangled in an AI driven design context Contributors Cesare Battelli Phil Bernstein Mario Carpo
