Communication Technology Update and Fundamentals August E. Grant, J. Rion McKissick Professor of Journalism August E. Grant, Jennifer H. Meadows, 2013-09-05 New communication technologies are being introduced at an astonishing rate. Making sense of these technologies is increasingly difficult. Communication Technology Update and Fundamentals is the single best source for the latest developments, trends, and issues in communication technology. Featuring the fundamental framework along with the history and background of communication technologies, Communication Technology Update and Fundamentals 12th edition helps you stay ahead of these ever-changing and emerging technologies. As always, every chapter has been completely updated to reflect the latest developments and market statistics and now covers digital signage, cinema technologies, social networking, and telepresence in addition to the dozens of technologies explored in the previous edition. The book also features industry structure and regulation history and theory along with full coverage of the latest technologies. The book's companion website <http://commtechupdate.com> offers updated information submitted by chapter authors and offers links to other Internet resources.

3DTV Content Capture, Encoding and Transmission Daniel Minoli, 2010-12-28 The First to Present 3D Technology as Applied to Commercial Programming for the Consumer. This is the first book to provide an overview of the technologies, standards, and infrastructure required to support the rollout of commercial real-time 3D Dimension Television (3D TV), 3D Video (3D V), 3D TV (3D TV), 3D V services. It reviews the required standards and technologies that have emerged or are just emerging in support of such new services with a focus on encoding mechanisms, formats, and the buildout of the transport infrastructure. While there is a lot of academic interest in various intrinsic aspects of 3D TV service providers and consumers ultimately tend to take a system-level view, 3D TV stakeholders need to consider the overall architectural system-level view of what it will take to deploy an infrastructure that is able to reliably and cost-effectively deliver a commercial-grade quality bundle of multiple 3D TV content channels to paying customers with high expectations. This text therefore takes such a system-level view, revealing how to actually deploy the technology. Presented in a self-contained tutorial fashion, the book begins with a review of 3D TV in the marketplace and the opportunities and challenges therein. Recent industry events related to 3D are also discussed. From there, the fundamental visual concepts supporting stereographic perception of 3D TV (3D V) are explained, as are encoding approaches. Readers will understand frame mastering and compression for conventional stereo video (CSV) and more advanced methods such as video plus depth (V D), multi-view video plus depth (MV D), and layered depth video (LDV). Next, the elements of an end-to-end 3D TV system are covered from a satellite-delivery perspective with explanations of digital video broadcasting (DVB) and DVB handheld transmission technologies. Technologies are assessed for terrestrial and IPTV-based architecture. IPv6 is reviewed in detail. Finally, the book presents 3D TV (3D V) standardization and related activities which are critical to any type of broad deployment. System planners, the broadcast TV industry, satellite operators, Internet service providers, terrestrial telecommunication carriers, content

developers design engineers venture capitalists and students and professors are among those stakeholders in these services and who will rely on this volume to discover the latest 3D advances market opportunities and competing technologies
