*A New Theory of Astronomy, Deduced from the Latest Discoveries* New theory,1857 **Religion, Reason and Nature in Early Modern Europe** R. Crocker,2013-03-14 From a variety of perspectives the essays presented here explore the profound interdependence of natural philosophy and rational religion in the long seventeenth century that begins with the burning of Bruno in 1600 and ends with the Enlightenment in the early Eighteenth century From the writings of Grotius on natural law and natural religion and the speculative libertin novels of Cyrano de Bergerac to the better known works of Descartes Malebranche Cudworth Leibniz Boyle Spinoza Newton and Locke an increasing emphasis was placed on the rational relationship between religious doctrine natural law and a personal divine providence While evidence for this intrinsic relationship was to be located in different places in the ideas already present in the mind in the observations and experiments of the natural philosophers and even in the history present experience and prophesied future of mankind the

result enabled and shaped the broader intellectual and scientific discourses of the Enlightenment

**Locke and Cartesian Philosophy** Philippe Hamou, Martine Pécharman, 2018-06-04 This volume presents twelve original essays by an international team of scholars on the relation of John Locke's thought to Descartes and to Cartesian philosophers such as Malebranche, Leibniz and the Port Royal authors. The essays preceded by a substantial introduction cover a large variety of topics from natural philosophy to religion, philosophy of mind and body, metaphysics and epistemology. The volume shows that in Locke's complex relationship to Descartes and Cartesianism, stark opposition and subtle family resemblances are tightly intertwined. Since the turn of the twentieth century, the theory of knowledge has been the main comparative focus. According to an influential historiographical conception, Descartes and Locke form together the spearhead in the epistemological turn of early modern philosophy. In bringing together the contributions to this volume, the editors advocate for a shift of emphasis. A full comparison of Locke's and Descartes's positions should cover not only their theories of knowledge but also their views on natural philosophy, metaphysics and religion. Their conflicting claims on issues such as cosmic organization, the qualities and nature of bodies, the substance of the soul and God's government of the world are of interest not only in their own right to take the full measure of Locke's complex relation to Descartes but also as they allow a better understanding of the continuing epistemological debate between the philosophical heirs of these thinkers.
