

Introducing Credanet

Credanet - What is it?

Credanet is an advanced patented electric heating system with controllability that helps provide significant reductions in home energy consumption. Designed to meet current standards of energy efficiency as outlined in the Housing Energy Efficiency Best Practice Programme, Credanet automatically 'learns' to use the most efficient electricity tariff and typically saves the homeowner 15% over conventional electric storage heating.

It's the only centrally controlled electric storage system recognised within NHER/SAP calculations to provide energy savings under the generic name of 'CELECT'. Credanet automatically complies with the control requirements for storage heating in Part L on the Building Regulations.

Using a patented mains borne signalling system, it utilises the existing wiring to link a choice of stylish, simple-to-install heaters. The central controller intelligently divides the home into three independent heating zones, adjustable by both time and temperature. This means that Credanet gives better demand performance than gas by achieving and maintaining desired comfort levels faster and achieving real zone separation.

The result? The right heat, wherever and whenever it's wanted.

Independent tests show that Credanet is a more effective and responsive form of heating than gas.

Fingertip control

Credanet brings a new dimension in control to home heating. It's an advanced electric heating system that uses a central programmer to allow fingertip control over the heating. The home can be divided into three independently controllable heating zones, so the householder gets very user-friendly central heating that's easy to control and makes the most of clean, cheap and efficient electricity.

How does it work?

The Credanet central programmer is the heart of the system. Essentially, it 'talks' to the heaters to allow the user much greater control over where, when and to what temperature the heat is provided, eliminating wasted heat and energy. The programmer uses mains borne signalling to communicate with a range of appliances - whether they are Creda SFH storage fan heaters, TSR storage combination heaters or TPR panel heaters.

Each of the heaters has integral factory-fitted transceivers, which are set during installation. The Credanet programmer then uses two-way signalling to allow a time and temperature profile to be controlled on individual heaters.

Works smarter to save money.

Credanet automatically 'learns' to use the most efficient electricity tariff to save the user money. It understands which tariff it is running on and will optimise economy tariffs for maximum efficiency. So whether controlling the generation of heat to be stored for later use or providing direct acting heat, the most economic option is always chosen. And as it works on virtually any tariff including fixed and variable period options, it offers greater flexibility. (For variable tariffs, special metering arrangements might be required - the Creda Technical Helpline can advise on 01782 385779.)
