Sustainable Development in the Digital Era Leonilde Varela, Goran Putnik, Manupati Vijaya Kumar, 2025-08-26

Collaborative manufacturing and management are a fundamental requirement in today's digital age to enable an innovative and sustainable development of companies. This is possible and highly recommended not just in the context of traditional companies but further in cyber physical systems and in the context of extended distributed networked and virtual organizations. The book provides fundamental methodologies, models, methods, tools, and platforms about collaborative engineering to support manufacturing and management processes and practices aligned with the current requirements underlying Industry 4.0 and Society 5.0. It describes the application of collaborative management paradigms about dynamic distributed integrated intelligent predictive parallel and real time based approaches and tools to enable collaborating entities including suppliers, business partners, and other stakeholders to develop projects and solve problems that are becoming increasingly more complex and challenging currently. Such collaborative processes and practices require companies and underlying stakeholders to be connected and to further communicate and share data, problems, and expertise and other kind of resources along with concerns, difficulties, and challenges requiring co-learning and the co-creation of knowledge, processes, methods, and systems to interactively support projects and problem solving. The book reviews the advances and provides case studies to assist scientists, practitioners, and students in high standard manufacturing management processes and practices to properly handle daily problems and challenges with a special focus on the use of recent paradigms and tools to support manufacturing management decision making through innovative methodologies and approaches for permitting researchers to learn, develop further work, and become advanced practitioners and promoters of collaborative management. **The**

Workplace of the Future Jon-Arild Johannessen, 2018-09-27. The Fourth Industrial Revolution is a global development that shows no signs of slowing down. In his book *The Workplace of the Future: The Fourth Industrial Revolution, the Precariat and the Death of Hierarchies*, Jon-Arild Johannessen sets a chilling vision of how robots and artificial intelligence will completely disrupt and transform working life. The author contests that once the dust has settled from the Fourth Industrial Revolution, workplaces and professions will be unrecognizable, and we will see the rise of a new social class, the precariat. We will live side by side with the working poor, people who have several jobs but still can't make ends meet. There will be a small salaried elite consisting of innovation and knowledge workers. Slightly further into the future, there will be a major transformation in professional environments. Johannessen also presents a typology for the precariat, the uncertain work that is created and develops a framework for the working poor as well as for future innovation and knowledge workers, and sets out a new structure for the social hierarchy. A fascinating and thought-provoking insight into the impact of the Fourth Industrial Revolution. *The Workplace of the Future* will be of interest to professionals and academics alike. The book is particularly suited to academic courses in management, economy, political science, and social sciences. **Supervisory Control and**

book offers a unique and holistic perspective on the future of work in the context of industry 4.0. It discusses the globalization of capital markets, how artificial intelligence can help organizations to be more competitive, and the new role of leadership in this technological landscape. The author argues that there are four categories of competences which will be required in order to maintain the relevance of human skills and expertise in the innovation economy. The new jobs that come into being will lend themselves to a particular set of skills. General competences will be necessary for roles involving the 4Cs of communication, creativity, collaboration, and change. Specific or STEM competences will be called for across the science, technology, engineering, and mathematics sectors. Human competences will lend themselves to positions comprising the SELC framework of social, emotional, leadership, and cultural skills. Critical or REVE competences will be in demand for roles embracing reflection, ethics, values, and the environment. The book provides a human-centric view of the current technological advancements of artificial intelligence and robotics and offers a positive outlook for human actors seeking continued relevance. It will appeal to scholars and students of the innovation economy, the knowledge society, and the coming Fourth Industrial Revolution.

Knowledge-based Reactive Scheduling Elizabeth Szelke, Roger M. Kerr, 1994. Reactive scheduling is concerned with monitoring and controlling the execution of predictive schedules and making any changes required to bring them in line with unanticipated events or disturbances happening in real time. Whilst predictive scheduling has been a focus of research for many years, it is only recently that explicit attention has been given to the specific problems of reactive scheduling and the relationship between the two. This publication explores the scope and status of both existing and potential approaches to reactive scheduling. Concentration is centred on knowledge-based approaches as the importance of domain knowledge, whether stored in computers or in the brains of experienced schedulers, is becoming increasingly apparent. Contributions examine a variety of approaches ranging from reactive scheduling decision support frameworks in which the knowledge comes mainly from the human through to completely new approaches to automated reactive scheduling such as neural networks. The book will be of particular interest to researchers, students, and engineers involved in the manufacturing and software development industries. In addition to providing a significant reference volume, it also aims to stimulate increased discussion in this emerging field.
